

Shown here is the Entry Level Tail Light

The entry level Tail light for MASS, uses ALL the same tooling as the OPP Headlight, and needs only a red coating on the inner clear lens to be changed into a tail lamp.

This OPP light may be matched with a small headlight, or with higher-spec headlight to be sold as a new SKU.

The ideal scenario, would be to sell this single light with both clear and red lenses, so that the single light SKU would satisfy those who need only a single light for any part of their bike.

The fastening mechanism needs to be resolved yet, but would be based on a living-hinge on the shroud, that would release a tab similar to a zip-tie within the band.
