

what if the size of
the e-pure was
increased?

“some algae species have been shown to be sufficiently high in oil content that less than 20 million hectares (10% of arable US land) could potentially produce the entire oil consumption of the US transportation sector.”

“algae can be a rich source of desirable nutritional products such as omega-3 fatty acids and beta-carotene. after extraction of any other valuable co-products, the remaining biomass can be used for animal feed or fertilizer.”
