

Telecommunications, audiovisual, and security are no longer stand alone systems. Technology changes and user demand have made formerly self-contained systems interoperable. For instance, users can now view live and recorded video, CCTV feeds, and data files on the same video display wall and use the same technology to record, store, and retrieve these types of information.

As a result, low voltage contractors must be proficient in all of these technologies as well as information networking—even if the project scope includes a single system.

At TECH inc, our systems capabilities encompass voice, data, audio, video, access control, surveillance, and intrusion detection.

Excellence in Design and Engineering

Our staff offers a comprehensive range of engineering and technical skills--all to help identify and address your critical system requirements. And we use only the finest and best-suited products and components. In every case, TECH, inc incorporates the most current technical and cost-efficient innovations.

WE MANAGE AND WE DELIVER

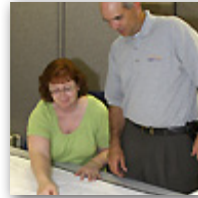

Successful completion of any project calls for meticulous time management and logistics. That's why TECH inc. provides total life style management on every project. The latest computer-based scheduling and document management tools, along with a dedicated project manager, ensure that each project is completed on time and within budget.

Your end-to-end low voltage solution.

From design to maintenance, TECH inc delivers state-of-the-art solutions for today's communication and security challenges. With TECH inc, there's no need to hire multiple companies. We have the certified staff and equipment partnerships needed to meet all of your low voltage needs.

**A Call to TECH inc.
Is the Only Call You Need to Make!**

Multiple Systems, Multiple Services, One Solution

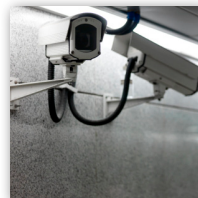

> **Design/Build.** Save money, speed delivery, and get fresher technology with the design/build approach.

> **Information Transport Infrastructure.**

Whether you need gigabytes of capacity or terabytes, TECH inc can provide a solution that is ultra-reliable and easily expanded or upgraded.

> **Integrated Security Systems.**

TECH inc. offers a wide array of interoperable devices and applications to furnish tailored solutions to meet the needs of an individual homeowner or an entire government enterprise.

> **Audio/Visual.** Whether you want to outfit a private residence or a public arena, we can develop a custom A/V package that gives you the state of the art on a scale that is right for you.
