

Calorie Dense Muscle Food For Hard Gainers

Food Type Dietary Supplement

Sun-Tec's Mass-Plex 4400 is a high quality sports formula designed specifically for serious sports people to aid them in achieving their nutritional and performance goals. Mass-Plex 4400 is designed to support muscle and energy nutrition especially for sports people partaking in an extreme mass gain nutritional diet which is loaded with extra calories to aid the most stubborn hard gainer. Mass-Plex 4400 supplies your body with many of today's most effective ingredients to help support nutritional needs. Feeding your body with adequate protein and calories are vital nutritional components when partaking in a mass and strength building physical exercise programme, and this is where Mass-Plex 4400 excels. One serve of Mass-Plex 4400 mixed in 300ml low-fat milk supplies your muscles with a huge 34grams of protein and 546 calories.

A Synergistic Protein Matrix Blend is utilised for best effect. This protein matrix combines exact ratios of New Zealand made Micro Filtered Cold Pressed Whey Protein Concentrate (WPC) and added free form amino acids that complement each other perfectly. Then the formula is boosted with food fuel to supply sustained energy for training. One serve in 300ml non-fat milk provides your muscles with 546 calories which supports energy and gains in body weight through healthy nutritional channels. The calories from Mass Plex 4400 are derived from specific high performance nutrients, such as Maltrin® M100 which is derived from dent corn and added high quality dextrose.

Maltrin® M100 is an extremely high quality Maltodextrin manufactured by Grain Processing Corporation USA and cannot be compared to simple sugars. In fact the dextrose equivalent of Maltrin® M100 is 10 which is very low and does not contribute to bloating of the stomach like many inferior carbohydrate sources do. This makes Maltrin® M100 a very slow release and low GI carbohydrate source which is an essential component of an effective mass gain formula suitable for everyday use within a structured nutritional diet.

To ensure Mass-Plex 4400 supports optimum results, Sun-Tec has also included creatine monohydrate; the most popular sports supplement ever developed, free form L Glutamine, Taurine, Glycine and Bromelain which is a mixture of protein-digesting enzymes. Mass-Plex 4400 is completed with the addition of important B & C vitamins.

Mass-Plex 4400 is a fantastic tasting shake that provides serious sports people with a controlled serve of protein, carbohydrates and support ingredients such as creatine and amino acids to help support extreme hard gaining athletes in recovery and muscle nutrition when combined with a physical training or exercise programme.

Mass Plex 4400 is not a sole source of nutrition and should be consumed in conjunction with a nutritious diet and appropriate fluid intake. Consult a health care professional before starting in any new supplementation, training or exercise programme. For an even higher ratio of protein to carbohydrate formula, Sun-Tec recommends "Maximus" which is Sun-Tec's superior high protein calorie dense muscle food formula
