

Prototypes

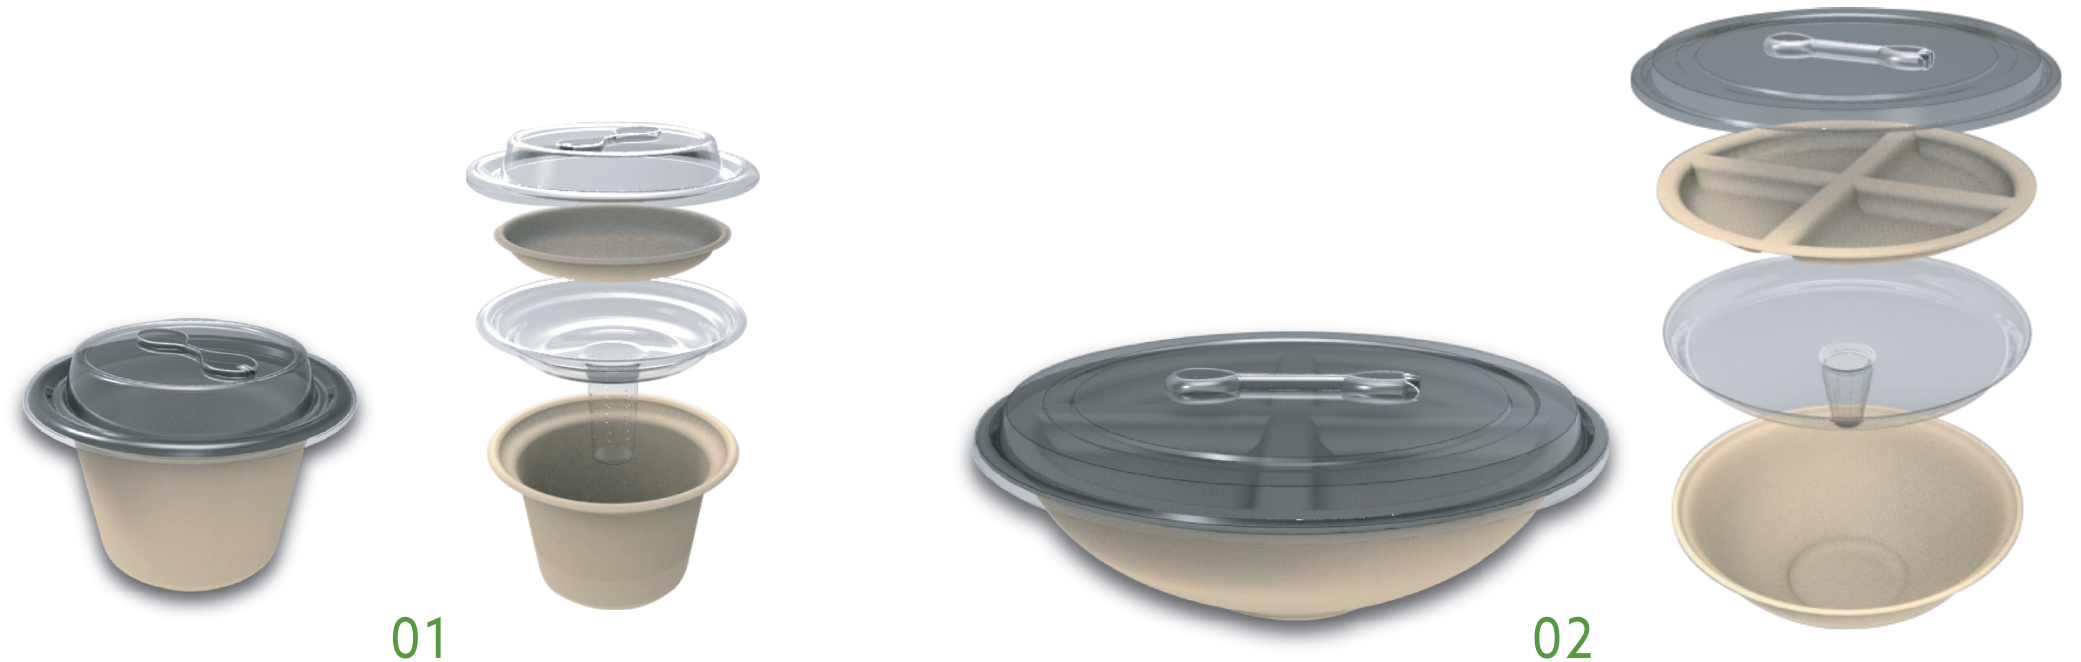

Through a series of 3D models and client feedback I overcame material and manufacturing issues while staying true to my original design.

Set A

To much material
in ice holder.

Condiment holder **doesn't**
need that much support.

Die-Cut utensil
will have a sharp edge.

Set B

Slots on the condiment
holder will **make it easy to**
remove.

Having to **remove the ice**
tube could be messy.

To steep of a draft
on the ice tube.

The folding utensil will still
have a sharp edge.
