YOUR PARTNER FOR BUSINESS TECHNOLOGY

Frattalone Companies, Inc.

Founded by Frank Frattalone in 1970, Frattalone has set out on a thirty-plus year journey of steady, controlled growth to establish themselves as one of the premier civil site work contractors in the Midwest.

The Challenge

Frattalone trucks make several load trips to one job site and scale tickets are used to track the trucks loads. These tickets were being manually sorted and filed. This was a tedious and time consuming process. Frattalone wanted to automate this filing. Because of the large volume of files Frattalone employees had a daily challenge with finding vendor invoices and ticket information for vendors. Frattalone wanted a new system where they could easily and quickly retrieve any information for vendors and varification of billing information.

The Solution

Imaging Path proposed a Fortis SE3-user system. This would automatically capture data from their scale tickets, label the images, and file them correctly according to the ticket number, job number, and date. This provided Frattalone with centrally stored images that could be retrieved from anywhere in the organization by searching their customizable index fields of ticket number, job number, or date. Imaging Path also configured an automated process for their AP Invoices. The operator can now type in any index information and instantly retrieve the correct document, for a requesting vendor, from anywhere in the organization. This process which would have taken 30 minutes per request could now be performed in a few seconds.

The Result

Now to get ticket information, employees can search the Fortis system by job or ticket number, date, and quantity and print it from their desktop. This saves them approximately two to three hours per week! Frattalone has since added processes for accounts payable and accounts receivable, timecards, and their affiliated company. Every quarter, they are now creating 15,000 less prints.

“Now I can show the ticket information on my desktop!”

The Fortis system **saves us** approximately **two to three hours per week!**
