CRADLE™ TECHNOLOGY

HAVOC

HIGHER: FURTHER: FASTER:

The North Face® CRADLE™ technology is engineered to naturally absorb impact, stabilize the foot and promote a biomechanically correct stride by supporting the perimeter of the heel and ensuring the underlying fatty tissues are anatomically positioned. CRADLE™ achieves the perfect balance of stability, cushioning and comfort to inspire confidence for any foot on any terrain.

SPEED: MEET STABILITY

Designed and built with the need for speed, the HAVOC Collection of high-performance, fast-packing footwear features biomechanically engineered CRADLE™ technology and an exclusive Vibram® outsole to provide the flexible support and protection critical for travelling fast and light over technical terrain.

HAVOC

TPU Snake Plate™ provides underfoot protection without sacrificing flexibility

CRADLE™ technology centers and stabilizes the calcaneus to keep the foot stable on uneven terrain:

1. TPU provides lightweight structural support
2. Heel cavity reduces peak pressure by redistributing weight upon heel strike

EVA body midsole provides lightweight cushioning

Co-molded PU provides durability and rebound for day-long pushes

Exclusive Vibram® rubber outsole provides lightweight, non-slip traction in a variety of conditions

RUNNING

SINGLE-TRACK HAYASA

Photo: Tim Kemple

ATHLETE TESTED. COMPETITION PROVEN.

Introducing the lightest and fastest running shoe The North Face® has ever created. Developed in close collaboration with The North Face® ultra-runner Tsuyoshi Kaburaki, the Single-Track Hayasa is a purebred racing or minimalist training shoe that provides the stability you need but eliminates the weight you don't, giving you an unbelievably sensitive, close-to-trail ride.

SINGLE-TRACK HAYASA

Men's Single-Track Hayasa A03Y NEW
