

Physician Office Access

STAT Scheduler has an integrated Physician Access solution which allows facilities to provide access to the enterprise scheduling solution, directly from the Physician offices via standard Internet Browser.

Access to the scheduling system from the physician's office is via a URL that can be accessed through the facility intranet portal page.

Surgeons who are privileged within the facility can be given access to their schedules, with ability to manage their schedules and block times if defined within the system.

With a single login, physician office staff can view, schedule and/or request appointments at all of their affiliated facilities.

The office can also complete all facility requested booking forms, submit pre-admission testing requests and print patient consent forms directly from the system.
