

STAT Exchange

- STAT Exchange, scalable for community hospitals, integrated delivery networks and RHIOs.
- Our Physician and Patient portals provide the intuitive gateway to all data sources across the Exchange.
- STAT has been at the forefront of web-portal development in healthcare for over five years providing physicians and patients with intuitive navigation and sub-second delivery. We incorporate best of breed portal technologies used in the sports, entertainment, retail and financial sectors.

STAT Exchange Portal is a unique, browser-based system that was developed for clinicians and physicians by healthcare professionals with extensive experience in understanding the unique requirements for patient care and information processing in hospitals, HIEs and RHIOs

Utilizing Ajax technologies, we have developed a highly responsive and innovative user interface that resembles some of today's most-visited web applications. STAT Exchange gives all required personnel – from physicians to the billing department – instant access to the relevant parts of patient charts, no matter which IT structure the information resides on.

Patient-centric

Unlike other portals, STAT Exchange is set up exactly like a real-world filing system and patient chart. STAT Exchange puts everything you need on a single screen, presenting clear, unified views of patient information gathered from multiple sources within a healthcare facility. Just a single click on a patient's name presents all the latest information (constantly updated in real time) as well as historical information – all securely available from any tablet or workstation, at any time.

HIPAA Compliance and Security

All the functions of STAT Exchange are accomplished from a web browser, either in the hospital, in the office, or at home. A unique username and password and 128-bit encryption ensure secure, HIPAA-complaint access to all relevant data. Every click is captured in a complete audit log.*

Extending the Value of Legacy Systems

STAT Exchange doesn't replace your existing systems, but integrates with all your business applications to deliver the data to the right resource at the right time. Physicians can view comprehensive patient information, consolidated on a real-time basis, regardless of where it resides in the system.

* Complete audit trail improves compliance and preparedness to meet regulatory standards (HIPAA, JCAHO)

STAT Exchange Features:

- CDR-Centric*
- Medication History*
- ePrescribing*
- Discharge Summaries*
- Hospital and Physician EMR Interface*
- Continuum of Care Document (CCD) Integration*
- Lite EMR for Physicians*
- Face Sheets and Demographic Data*
- Orders*
- Labs*
- Transcriptions/Medicines*
- Images*
- Patient Watchlists*
- Critical Messaging*
- E-sign reports*
- Charge Capture*
- Multiple User Roles*

STAT Exchange at a Glance:

Provides a single point of access to real-time patient clinical information from multiple disparate systems

Highly responsive and innovative user interface utilizing Ajax technologies

Facilitates clinical decision-making at the point of care

Allows E-signing of documents for significant time savings

Easy to Learn / rapid adoption

Access is available anywhere at any time (24x7x365)

No client software to install – browser based
