

# Designed for your needs, and for your lifestyle.

Sluice enables independent living by helping people with compromised dexterity in their upper limbs pour from beverage containers. Its unique design supports and guides a variety of container shapes and sizes (such as a half-gallon milk carton) through the conventional pouring motion. By reducing the pain and difficulty commonly faced by people with arthritis, tremors, injuries, or other maladies of the hands, arms and upper torso, Sluice instills a sense of vitality and increased self-worth.
