Full Custom Design Procedure

Assemble your artwork:

-Make a sketch, do a computer mockup, or find a picture of a design and email it to our graphics department. Or let our artists design something for your original team!

Please make sure to note that artwork is only allowed on the white areas.

If you have your own designer, please follow these guidelines:

-Zoca logos are standard placement. Please do not move or resize them. However, you have unlimited ability to apply your own colors to the logo to match the design.

Art Size:

-Only one set of the artwork is created to print all sizes. Once the artwork is placed in your pattern, the Zoca artists can easily transfer it to the print production templates.

Vector Images:

-Vector art is preferred to produce smooth lines.

Raster Images:

-Raster or bitmap images can be used to achieve photographic effects. The preferred raster image's minimum resolution must be 150dpi to encourage high-quality reproduction. All web-based files such as JPG's and GIF's are unacceptable.

Color:

-We recommend you choose your colors from the Zoca Color Chart provided on our Custom Page, but you are welcome to send a color sample if you desire an exact match and no Pantone color is available. The color on-screen may vary from the final product. Please refer to an official Pantone Color book which can be found at your local paint shop (Kinkos).

Art Margins:

-Foreground Art (such as logos, text, etc.) should not be placed close to edges. It is important to note that a portion of these areas will be cut off and/or sewn up in production.
