CLC - General Information

Cosmetic Laser Center of La Jolla is a high technology, state-of-the-art medical practice with a spa-like atmosphere, equipped with the latest and most advanced Laser and

Intense Pulsed Light Instrumentation available for skin care and beautification. Our on-site Medical Director is a Board Certified Physician in multiple medical specialties and has had over 30 years of experience in the use of lasers for a variety of applications. Our clinical staff is composed exclusively of Registered Nurse-Specialists with intensive training and experience in laser skin care.

Laser Hair Removal

Finally, no more waxing, shaving, plucking or bleaching!!!

Lightsheer Diode Laser™ treatment for hair removal is fast, gentle and precise. Treatments that might span months

or even years with electrolysis will take a few short visits to Cosmetic Laser Center of La Jolla.

The Lightsheer Diode Laser™ offers a gentle, long-lasting solution to unwanted body hair using Photothermolysis. The hair follicles are disabled from thermal heat, impairing their ability to grow. Unlike electrolysis, which kills one hair follicle at a time, the laser reaches and treats hundreds of follicles at once. You will see the results starting with your VERY FIRST session. The hair growth will be less and the hairs finer and weaker; your skin will become smoother; and the hair pores on your skin will become less visible after each session.

IPL Photorejuvenation (Foto Facial™)

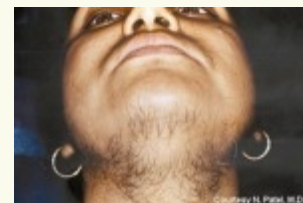

Sun damage, rosacea, red blotchy areas, brown age spots and broken capillaries can be treated through Intense Pulsed Light (IPL™) Photo rejuvenation. Foto

Facial™ is a non-invasive treatment that erases skin damage without disrupting the skin's surface.

This patented technology supplies a broad spectrum of light which reaches deep down to the collagen producing level of the skin, remarkably reducing the signs of aging. Most common areas to be treated besides the face are neck, chest, arms, hands and even legs. Any area that gets exposed to the sun and damaging ultraviolet rays can be treated.

Before

After

Microdermabrasion

Our additional skin rejuvenation treatment, Microdermabrasion, gently removes dead flaking skin cells while stimulating the production of collagen, resulting in fresh, younger looking skin. With the aid of micro-crystals vacuumed through a delicate hand piece, held at a precise angle to the skin, the procedure gives the skin a polishing peel. In as little as thirty-five minutes this gentle abrasive technique efficiently produces satisfying results. Treatments are applied through a course of weekly sessions. Microdermabrasion works well in conjunction with the IPL treatments.

Spider and Varicose Veins

Cosmetic Laser Center of La Jolla successfully treats spider veins and varicose veins non-invasively with the ND:YAG Laser. This quick treatment uses the principle of "selective photothermolysis". This means we elevate the blood temperature high enough to coagulate the blood without damaging the tissue or surrounding skin.

Acne Treatments

We treat acne and acneic skin with several different methods. Cystic acne can be successfully treated with IPL treatments, which break down the cysts and destroy the bacteria causing the breakouts.

Less severe acne may be treated with a series of microdermabrasions and glycolic peels. Both are augmented with beneficial products to accelerate the skin rejuvenation process. We also treat the pigmentation and scarring caused by acne with IPL treatments and the YAG Laser.
