

Full-station overview

五

Full-station

Full-station is an optimized workstation, for the professional world of CAD, Graphic Elaboration, Text manipulation.

Full-station is patented, and is composed by one or more wide screens, at least a touch screen, a big tablet active desk-top, a mouse, a tablet pen, a keyboard, one or more ***Ring-pen***, and a ***Pedal-key***.

Ring-pen is a small peripheral in shape of ring, that includes a micro tablet pen / micro mouse, to be worn on the fingers and to be used on the tablet active desk-top and on the touch screen; useful for CAD, Graphic Elaboration, Text manipulation. It doesn't need power supply, and doesn't interfere with the use of the keyboard; it can be worn on any finger, and in any position along the finger itself, according with the required precision. ***Ring-pen*** has been studied to be kept worn for long time on your hands without problems, in order to avoid the terrible waste of time in searching, reaching, taking and releasing, typical of the use of traditional mice and tablet pens.

More than one ***Ring-pen*** can be contemporarily worn on the hands, and different functions to each one of them can be assigned via software (pen, eraser, line thickness, colour, and so on); moreover, ***Ring-pen*** is also dedicated to all the PC users, because it offers better performances respect to the traditional mice and tablet pens.

The ***Pedal-key*** includes a keyboard with programmable functions, to be activated by the movement of the feet; in this way, the operator can coordinates the delicate drawing actions performed with the ***Ring-pen***, with the mouse, or with the tablet pen (selecting, alteration, and so on), with the inputs of "enter", "save", and others, activated by the ***Pedal-key***.
