

# FLOATING STOOL

## *Bent Plywood Stool*

The Floating Stool is a present day take on Alvar Aalto's stool 60. With its Baltic Birch top and bent plywood leg, the Floating stool has no visible fasteners and is able to support weights in excess of 250 lbs. The sensation of floating or hovering is felt when the user is sitting on the stool due to its offset leg and its overall springiness. The floating stool was designed as part of a 2 day design charrette.
