

# The Cool Style

Model is a natural level 7

Brush hair through thoroughly and then begin by spraying Senscience Thermal Spray on each section.

Start your sectioning by dragging front and side sections back to the ear, to give a flatter over-directed movement. Continue to roll sections past the ear and base until you have completed set.

Allow set to cool thoroughly before removing rollers. Once rollers are removed, brush hair to remove roller marks. Begin at the front of the hair, back combing to root, allowing ends to remain loose.

Continue to back comb section by section, working with Senscience Designer Flexible Shaping Hair Spray to allow hold with flexibility as you work.

Continue up the center of the shape by cross pinning a second bobbie pin over the first (this ensures that you do not have loose areas to your secured hair).

Continue up the head and then bring a bobbie pin down in the opposite direction to hold the hair secure from both ends.

Once hair is secured; bring the opposite side around to meet at the center of the nape. Using your finger, flip/twist the hair firmly up towards the crown.
