

Distortion

This design has a formal symmetrical floor plan around a central atrium – 9 stories in height – office space is uniformly spread around the central core. The building’s perimeter is almost equidistant from the core on all sides of the building. The exterior façade will be a double wall system with an outer metal screen wall with an Islamic patterning. The inner wall will be a glass and metal curtain wall system. The angles cut diagonal in the screen wall reveals the interior curtain wall and gives an interesting counterbalance to the orthogonal inner wall. The diagonal outer wall gives dynamism to the building – truly an iconic form.

PROJECT DATA

size	33,000 sm
cost	Unknown
Program	Central Library, Auditorium, Health Club, Mosque, Computer Training Center, Office Space
Principal	Jerrel Angel
Project Manager	Jerrel Angel
Project Role	Project Designer, 3d model, assisted in concept design and planning for all five design options, produced all renderings
