

{ - Matthew Seal: President's Award - }

Matt contributed significantly to BBO in his first four years at Tektronix. He helped improve key performance metrics such as new product throughput, delivery, and board quality. He spearheaded implementation of an electrical verification process on passive components that helped reduce the overall defect rate by more than 45%. He demonstrates a willingness to learn, mentor others, and push our industry forward.

President's Award

The President's Award recognizes recent college hires that have made significant technical contributions early in their careers, resulting in key improvements to Tektronix products or processes.

During two college internships, I realized that I could use my technical background and common sense to improve the safety, efficiency, and quality of people's jobs. That is truly magical.
