

Most innovative product or service in the last 10 years:

I think that the National Geographic Genographic Project, which charts the history of human migration through the analysis of DNA contributed by hundreds of thousands of people, is the most innovative project in recent years.

Rolf Anderson

Signal Analysis System and Calibration Method

3rd Patent

The idea for this patent was the result of customer research conducted for a performance oscilloscope product. This patent allows customers to remove the loading effect of probes on the signals from their circuits. An additional capability allows customers to view their signals at virtual test points that they cannot otherwise access.
