Rolf Anderson

Principal Engineer

Beaverton, Oregon

26 years with Tektronix

“I like all types of music: from classical and classic rock to current music and instrumental.” Rolf’s eclectic taste in music echoes his interest in the various geologies of the Pacific Northwest and beyond. He and his wife enjoy reading books in The Roadside Geology series. One memorable discovery they made a few years ago while traveling was that the Okanogan River near Omak, WA follows a boundary between two micro-continents that docked with North America millions of years ago: the Okanogan micro-continent and the North Cascades micro-continent.

The history of the land inspires Rolf.
