

ACCESSIBILITY
Difficulties for older users to interact with high cookers / washing sinks - Lap based would be better / low table.

ENERGY
Whole area / fridge need to heat / lost press only 1 item = Massive waste of space + power.

SPACE

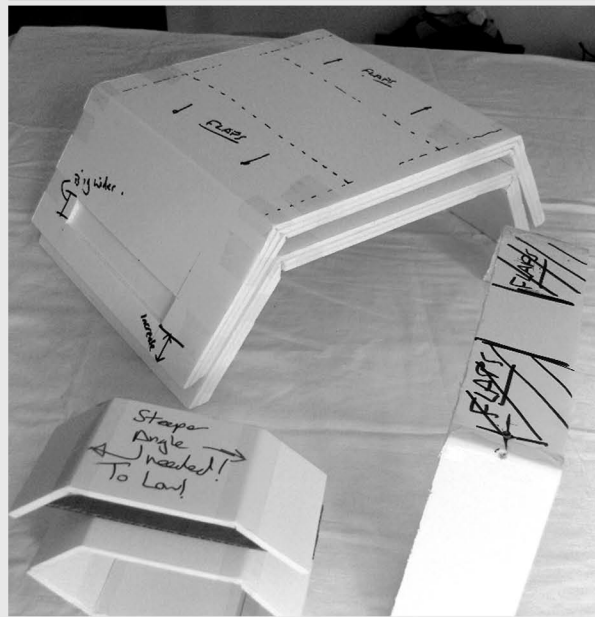

MESS
Dirty food / Dishes get moved around + left for washing up at a later date.

STORAGE
Social Breakdown! Lx fr. dinner + families not eating together.
Pots / cooking needs to be reintroduced into the family environment.

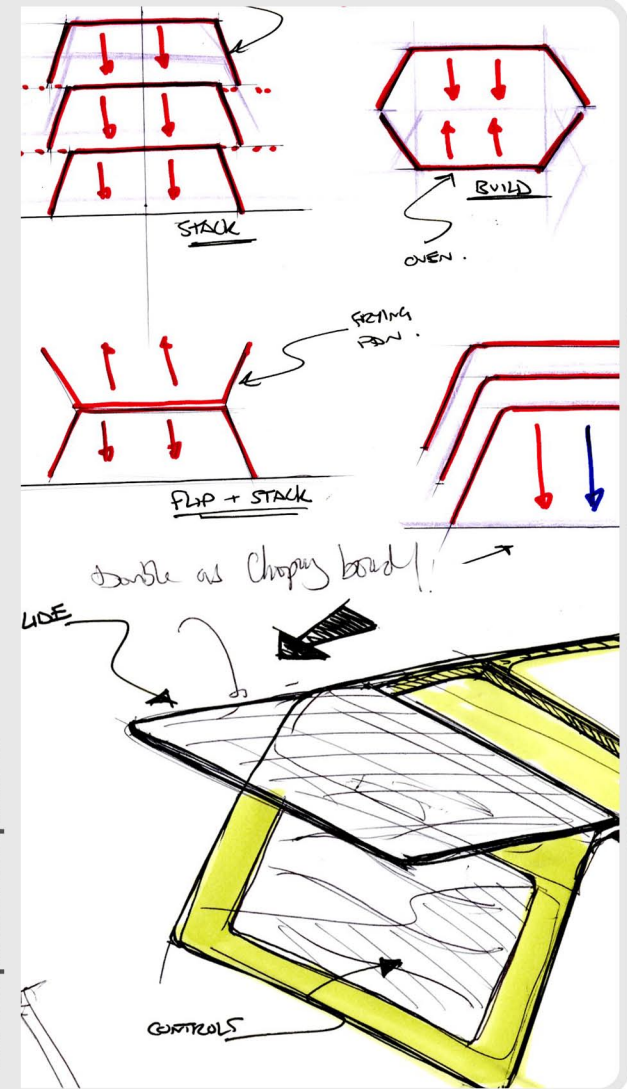

LIFESTYLE / FAMILY

heavy + takes ages to set up.

Sketch modelling / Form realisation

Concept development

Electrolux Totem

The Probes

Empathic research was initially conducted to gain a greater understanding of the core issues. This helps to easily relate and Identify areas that cause particular issues or problems. Sketches

and paper / foam models were used to develop the design into three dimensions. I keep using the foam models / sketches until I am satisfied with the design. Ergonomics also have input

from Alias where manikins are used to ensure Inclusivity.
