

Resolve+ System

Design

Resolve+ revisits the concept of Resolve® by Ayse Birsel and starts again.

Function and form meet in Resolve+. Its highly flexible infrastructure provides infinite possibilities for designers and architects to create inspiring and imaginative world-class facilities that enhance corporate identity and ultimately improve business performances.

Features

The workplace experience

- A single universal pole allows two, three or four way connections.
- Horizontal arms attach directly to the poles at ninety degrees to create task-centred, user-focussed working environments.

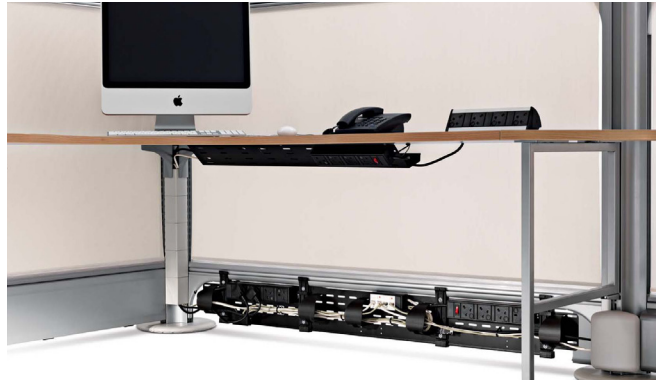

The simplicity of the Resolve+ vocabulary simplifies planning, specification, ordering, installation and churn.

A natural approach

- Productivity is strongly affected by light. Natural light has been shown to reduce eyestrain, increase productivity and even decrease absenteeism in the workplace.
- Natural light gives a better sense of well-being, makes spaces appear larger and lessens demands on electricity, an important factor in today's energy-conscious world.

Resolve+ screens are uniquely translucent and allows light to breathe through the porous material.

Attach, support, retain

- Varying structural pole and screen heights can be used in conjunction to form screened off corridors with varying degrees of permeable privacy.
- Resolve+ is designed to be adaptive, component simple and interchangeable for long term use.
- Brackets attached to the base of pole to allow power and data to be transferred from one workstation to another.
- Essentially cables and conduits are contained supported and distributed between workstations along the lower support arms – workstation can be reconfigured easily without affecting power and data

An office does not need to look like an office as there are no restrictions imposed by fabrics or in-fills. Customers can submit their graphics via a web-based user-friendly interface.

Sustainable design

- A Resolve+ workstation weighs one-third less than a traditional systems workstation and has a greater strength to weight ratio.
- High performance, flexible and durable, Resolve+ comes with a 12-year unlimited warranty like all Herman Miller products
- Resolve+ components are easily disassembled for recycling; workstations are 86% recyclable and contain 27% recycled materials.
