

Ethospace System

Design

Ethospace lets you express in interior architecture what you or your organization is all about. Its dexterity and extensive product line help you define, and redefine, spaces to support all kinds of work and give your people exactly what they need.

Features

Freedom and Diversity

- Creating with Ethospace - you have nearly unlimited design options. You can make traditional or out-there contemporary spaces.
- Make a strong architectural statement or create a space that's open, light, and transparent.

Choosing from 9-, 120, and 135 degree connectors means you can create individual workstations, enclosed offices, and group spaces that flow together, or stay separate, with ease.

Evolves with you

- New components integrate with what you already have. Change, reconfigure, update-your investment is protected.
- And you can make big changes while keeping the steel-frame walls in place. Off-module capability means that tiles and other components can attach at any point horizontally along either side of a wall.

Sophisticated and technologically adept, with comprehensive options that make the most of planning possibilities.

Huge capacity

- When powered, the open-frame interior holds up to 74 Category 5e 4-pair UTP cables or 57 Category 6 cables at a 60 percent fill rate in the base.
- An additional 47 Category 5e and 36 Category 6 cables at every 8 inches of frame height.

Ethospace accommodates the changing technology of the 21st century workplace.

The first frame-and-tile system

- Structural steel frames define the Ethospace system workspace, provide the foundation for hang-on components, and house yards and yards of wiring and cables.
- The individual segments called tiles attach to the frames to make walls, allowing tremendous variety and control of the design.
- Glass, solid, rail, perforated, open—choose from an unparalleled array of options.

Ethospace's first-of-a-kind frame-and-tile infrastructure adapted to the surrounding space and provided a flexible foundation for thoughtful change.

Sustainability

- Ethospace respects the planet. The steel frames that form the basis of the system are 100 percent recyclable; the entire system is 78 percent recyclable.
- Made of 35 percent recycled content, Ethospace components are nontoxic, renewable and Greenguard certified as a low-emitting product
