

Abak® Environments

HermanMiller

Design

Abak Environments is a high-performance desking system capable of numerous applications anywhere in the world. It can be anything from a basic, stand-alone desk to a performance wall that support collaboration in human-centered work spaces for any culture in the world.

Features

Simple Versatility

- Create open-plan environments, meeting areas, private offices with simple components.
- Totally non-modular - Surfaces and screens can be attached anywhere along the performance wall or beam.

Abak works as smart as it looks. A complete office landscape can be provided with a single product platform. Closed offices, meeting rooms, break out or open plan spaces, with a single or varied look.

Worldwide solution

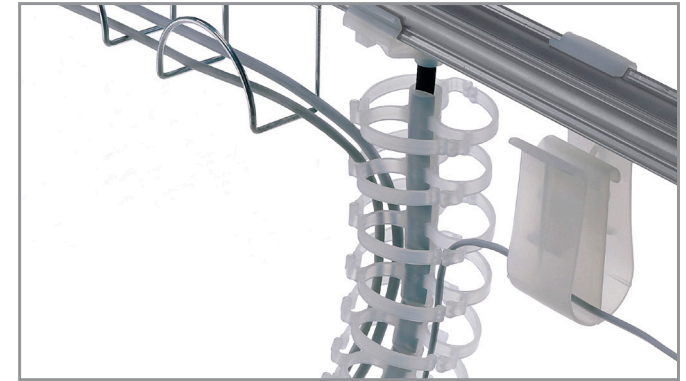

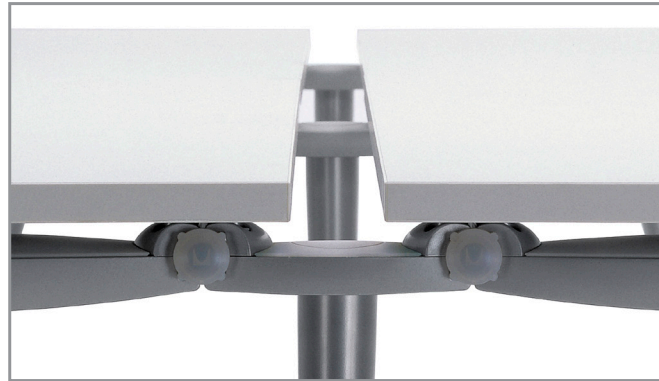

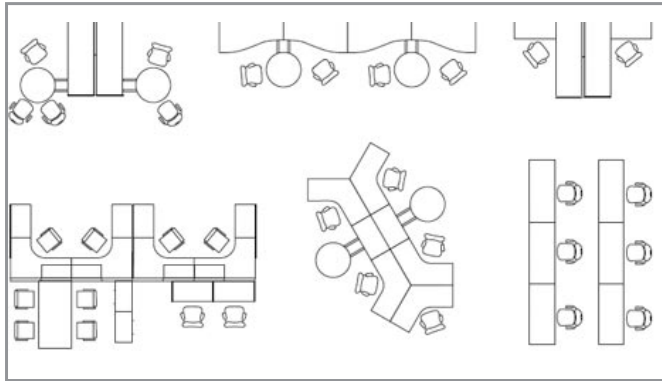

- The twin-beam under structure is the foundational element worldwide.
- Adapts to the aesthetics and work styles of multiple cultures.

Helps maintain a consistently elegant and contemporary look throughout global facilities.

Wire Management

- Delivers power and data to workstations, divides space, and supports components.
- Data ports and receptacles are located at work surface height or below the surface.

Some workstations need extensive cabling, some very little: some need capacity, others quick-change flexibility. Abak offers various levels of add-on wire management capability according to specific workstation need.

Sustainability

Abak Environments is GREENGUARD certified as a low-emitting product that meets current indoor air quality standards. It is designed for minimal material use, reduced energy requirements, easy reconfiguration, and durability.

Abak desking is up to 61 percent recyclable at the end of its useful life. It is comprised of 43 percent recycled materials.

Warranty

Herman Miller warrants Abak environments to be free of defects in material and workmanship for 12 years - regardless of the number of shifts during which the products are used.
