

## Action Office System

## Design

Action Office system, introduced by Herman Miller in 1968, was the world's first open-plan office system - a bold departure from the era's fixed chairs, fixed desks, and fixed assumptions of what office furniture should be.

## Features

### A fresh approach

- A thin base option (with quick-connect base power) installs with no tools.
- Enhanced glazed panels (glazed, partial-glazed, stacking glass, and door) have a clean aesthetic with minimized glazing frames and trim
- The infill can be clear or opal. Refined trim reduces top-cap scale, makes cleaner lines, and creates a cohesive look.

*An evolving system that is never obsolete. Components manufactured today work just fine with the original generation of Action Office products*

### Build to last

- The connectors align the panels automatically, and the steel construction ensures that they hold up over time, even with repeated reconfiguration.
- The stress-skin construction allows the hard-working panels to meet or exceed industry requirements for strength and durability.

*A durable, well-built system that will provide a solid return on investment for your business.*

## Earth-Friendly

You might be surprised at how green a product developed in the 1960s, when “green” signified the colour you wore on St. Patrick’s Day, can be. The typical Action Office setup is made of 40% recycled content and is up to 25% recyclable at the end of its useful life.

Action Office adheres to McDonough Braungart Design Chemistry (MBDC) Cradle to Cradle Design Protocol and is GREENGUARD certified and can contribute to LEED certification.
