

# SAYL™ Chairs

## Design

Beautiful design, first-class ergonomics, elegant engineering, extremely small environmental impact, and a 12 year warranty -- SAYL is everything a Herman Miller chair should be. At a very attainable price.

## Features

### Inspiration: Golden Gate Bridge

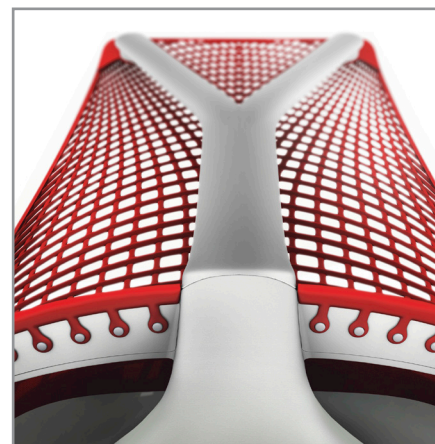

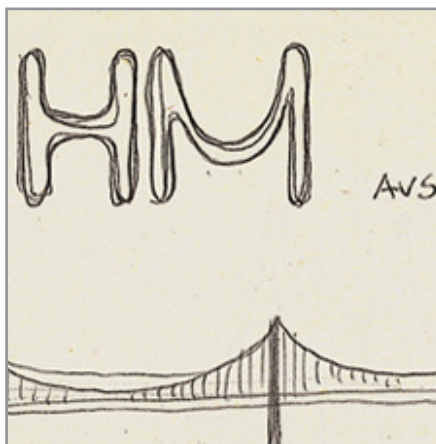

The Golden Gate Bridge and the sailboat inspired Yves Béhar's imagination. Béhar wondered, could the engineering principles of a suspension bridge be applied to a chair? It turned out that, not only was it possible, but using a suspension tower to support an unframed back would reduce materials, weight, and environmental impact.

*Support is moulded directly into the 3D Intelligent back material.*

### Family of Seating

We designed a whole family of SAYL chairs, including work and side chairs. All with the same high style and innovative engineering.

*A perfect fit for multiple environments.*

**Attainable Design**

As affordable as it is inventive, SAYL disproves the notion that a reasonably priced chair means offhand design and minimal ergonomics. From the beginning, our goal was to make a high-quality, beautifully designed, comfortable chair that lived up to our standards and was also affordable.

*SAYL is that chair.*

**Eco-dematerialised™ design**

It achieves high standards in design and comfort whilst using the least amount of material. Being 90% recyclable (suspension) and 86% (upholstered), and containing no PVCs, SAYL is MBDC Cradle-to-Cradle and GREENGUARD certified.
