

01.5 CIRCULAR

EXPLOITING:

All the structures made in this project follow the same role. Some are smaller because it is important to make a differentiation between those traffic lights that are used by the vehicles and those which are used by the pedestrians. Also the arrow's traffic light, which is also used by vehicles, is as big as the pedestrians'. Even though this fact, some pieces like the arm or the gasket which is located between the arm and the body, remain exactly the same. Saving thus extra pieces and making the project cheaper.
