

01.3 CIRCULAR

APPLICATIONS:

Circular possess the likelihood of incorporate solar plates. It is possible install a simple structure on the post with which we can obtain solar energy instead of having just a lid on the top of. It would be trendier to incorporate solar plates directly on the traffic light's set, but even though the life of the solar plates is fairly long (between 25 and 30 years) they are not easy to get rid of. These solar plates should be located just when there is the opportunity of getting good advantage of them, otherwise we could damage more our environment than protect it. Also the long post design has also the chance of allowing the solar plate's installation.
