

I. STAY IN GROUPS

33

Some fish travel in a “school” just like you kids. The main reason is that there is power in numbers. Fish gain specific advantages by traveling together in groups.

A. By staying active in a group, fish have more eyes to look out for sharks. The sooner one of the fish spots the predator, the more quickly the group can flee.

34

B. Another benefit of “schooling” is that large groups are less likely to be attacked by a predator because the group looks like a bigger, scarier animal.

35

C. Finally, it's harder for predators to pick out individual prey in a group because many moving fish confuse and distract the predator. When a fish is alone, it becomes an easy target.
