Software Solution

New Application Development

A number of companies and individuals now want faster and reliable applications with innovative features that cater to their business and at the same time increase their productivity. We provide justice to their investments and resources in the field of IT. We have well structured and practical software development processes which enable our experts to get a clear idea of the customer's requirements. Along with these solutions, we bring in customized support and services for the applications. The applications we design are highly scalable and have the capability of adding more features with the changing requirements of the customers. Data Protection and Application Security are of highest priority for us at Qonta.

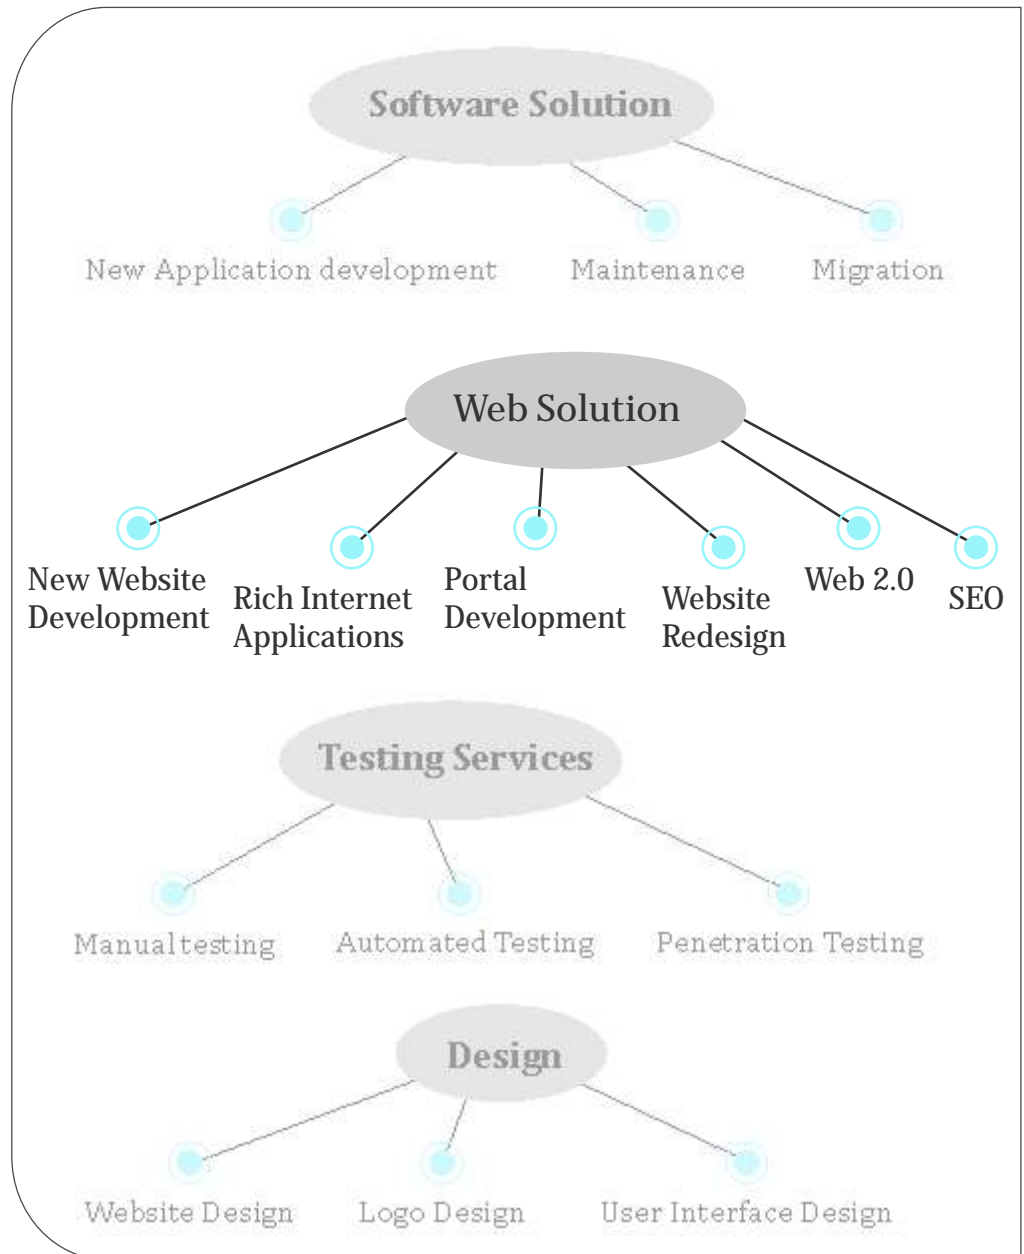

Maintenance

With the changing degrees of requirements and fast turn-up time sought by companies, the issue of maintenance has become very important. The companies want faster processing of information in their software and fault correction. At Qonta we take maintenance very seriously and have a process of carrying out the maintenance plans according to the international standards. For us maintenance is not just a bug corrective measure but a way to enhance the functionality of the software application we are catering to. Maintenance, also leads to upgrading the product from time to time based on the current market scenario. This acts as a value added service which is in-turn beneficial for our clients.

Migration

Migration gives a different and better platform for the software application. Re-implementing applications over new and advanced platforms reduces the operational costs thus justifying Migration. With more advanced systems; the users will be able to utilize more and more advanced features with time. We believe that Migration opens up avenues for future development of the system as a whole.

Web Solution

New Website development

We undertake new website development projects from scratch. We strongly believe in the originality of the design and hence we work to produce it. We equally respect our client's views and designs and can then look into converting them into a fully functional website or portal. Our UI experts use state of the art technology to study the behavior of the Internet Users. Our designs are not only a treat for the eyes but an excellent experience for the users in terms of its usability. We also make sure that the web applications created by us are functional on the most popular browsers.

Rich Internet Applications

With increasing mobility requirements of the client and the global distribution of work at one time, it is important to have Web Applications which have same functionalities as the traditional applications yet not requiring any software installations. We do create RIAs (Rich Internet Applications) for our clients with Secured Servers as a key concern.

Portal Development

One of our main areas is the development of Web Portals. We are currently developing a web portal which is for infotainment purposes including city based search in the most unique way ever shown by any website in India.

Website Redesign

We strongly believe in improvisation of old softwares and websites with time and new technology, revamping of old websites and giving them a new and more approachable look.

Web Solution (contd...)

Web2.0

When we talk of enhanced creativity, collaboration among users and information sharing over the Internet – the first term that comes to our minds is 'Web 2.0'. Web 2.0 clearly portrays what our company wants to deliver to its clients; value for their money, satisfaction with the finished product. Our softwares and applications are creative and simultaneously user friendly.

Rich Internet Applications

We take Search Engine Optimization sincerely and we should; as the business of a website depends upon the number of visitors clicking their way into it. In other words, we create websites and its contents as well as provide support in their marketing strategy to capture the maximum out of the web.

Testing Services

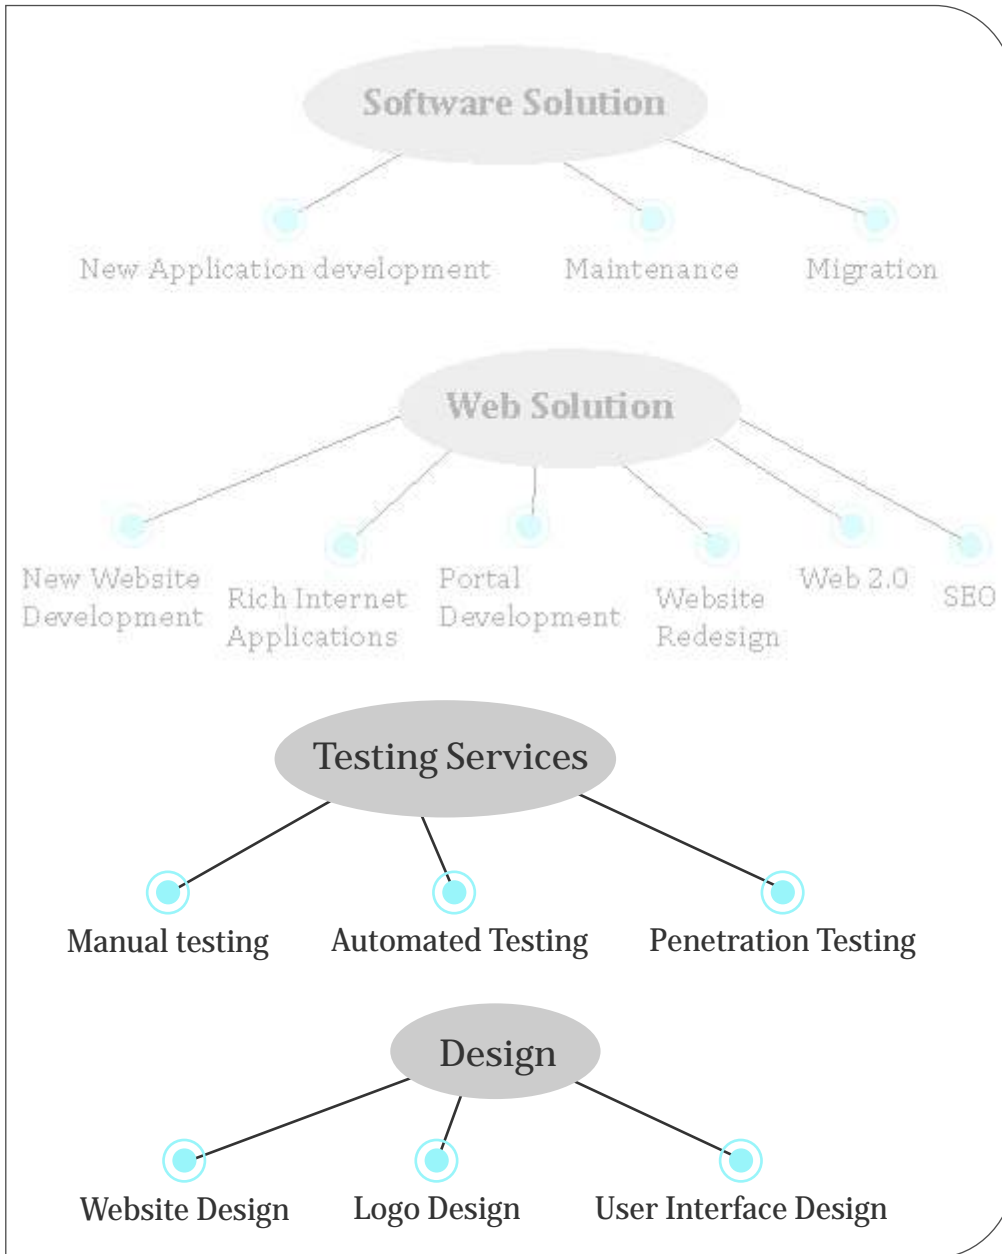

We offer system and user acceptance testing services. We provide following types of testing -

- Manual testing
- Automated testing
- Penetration Testing

Apart from standard testing tracking tools like Test Director (TD), Quality Assurance (QA) etc. we have our own defect tracking tool called Q-QATTM (Qonta Quality Analysis and Tracking) We give a lot of stress to UAT (User Acceptance Testing) also.

Services ...

Design

Design is one of the prominent feature in our products. The designs are uniquely created by our team taking care of the end users using the product and their perceived needs. We carry out extensive research on the usability of the design based on the requirements. Our designs are user friendly and undergo rigorous testing at the each level of the Product Development Life Cycle .

Cirrus Enterprise Ltd., UK

We are providing them with technical support in addition to developing a large scale finance & sports related portal to be used by a large user base. We also provide them with IT Security Consultancy.

Vananchal Gramin Bank VGB

Sponsored by SBI; Vananchal Gramin Bank is using Qonta's complete (automated) banking solution "BanQer 2.1" with various branches implementing and successfully running them. We have provided them with an end-to-end solution which includes the data entry process and server management on a per branch basis.

Twenty Four Seven Research Pvt. Ltd

www.24x7research.com is an e-Learning and equity & commodity market research portal based in Pune. We have customized our e-Tester (application for this company which incorporated flash based learning; in addition to customizable test and multiple reports.)

Numind Consultants Pvt. Ltd

Headed by Mr. Anjan Banerjee who has 25+ years of IT experience pan industry; Numind consulting provides us with consulting services with a focus on Government & International clients.

Brandwidth Events

Brandwidth Events is our partner having a pan India presence. We provide them with technical support for events and promotions for online and digital marketing in flash programming and game development.
