

Psychotronic technology has long been thought to be impossible by the majority of people and have been relegated to science fiction. The fact is that scientists developed this technology into reality at least thirty years ago and started experiments with unwitting people.

Psychotronics is the ability, using extremely low frequency (ELF) waves and other means to manipulate a person emotions, thoughts, bodily functions, will etc all from a remote location. Using this technology a person or possibly an entire population can literally be controlled like a robot with a remote control. How is this done?

Earth is wrapped in a donut shaped magnetic field. Circular lines of flux continuously descend into the North Pole and emerge from the South Pole. The ionosphere, an electromagnetic-wave conductor, 100 kms above the earth, consists of a layer of electrically charged particles acting as a shield from solar winds. Natural waves are related to the electrical activity in the atmosphere and are thought to be caused by multiple lightning storms.

Collectively, these waves are called "The Schumann Resonance," the current strongest at 7.8 Hz.

These are quasi-standing ELF waves that naturally exist in the earth's "electromagnetic" cavity, the space between the ground and the ionosphere. These "earth brainwaves" are identical to the spectrum of our brainwaves. (1 hertz = 1 cycle per second, 1 Khz = 1000, 1 Mhz =1 million. A 1 Hertz wave is 186,000 miles long; 10 Hz is 18,600 miles. Radio waves move at the speed of light.)

The Creator designed living beings to resonate to this natural frequency pulsation in order to evolve harmoniously.

These natural geomagnetic waves are being replaced by artificially created very low frequency (VLF) ground waves coming from GWEN Towers.

Dr. Andrija Puharich (in the 1950 & 60s), found that a clairvoyant's brainwaves turned to 8 Hz when their psychic powers were operative. In 1956, he observed an Indian Yogi controlling his brainwaves, deliberately shifting his consciousness from one level to another. Puharich trained people via bio-feedback to do this consciously, that is, creating 8 Hz waves with the technique of bio-feedback. A psychic healer generated 8 Hz waves through a hands-on healing process, actually alleviating that patient's heart trouble; the healer's brain emitting 8 Hz.

One person, emitting a certain frequency, can make another also resonate to the same frequency. Our brains are extremely vulnerable to any technology that sends out ELF waves, because they immediately start resonating to the outside signal by a kind of tuning-fork effect.

Puharich further experimented, discovering that,

- \* 7.83 Hz (earth's pulse rate) made a person "feel good," producing an altered-state
- \* 10.80 Hz causes riotous behavior
- \* 6.6 Hz causes depression.
- \* 10 Hz puts people into a hypnotic state

Russians and North Koreans use this 10 Hz frequency in portable mind-control machines to extract confessions. (This system can also be found in some American Churches to help the congregation believe!)

Puharich was somehow induced to work for the CIA where he and Dr. Robert Becker designed equipment to measure these waves and their effect on the human brain. Puharich started his work by putting dogs to sleep.

By 1948/49, he had graduated to monkeys, deliberately destroying their eardrums to enable them to pick up sounds without the eardrum intact. He discovered a nerve from the tongue could be used to facilitate hearing. He created the tooth implant that mind-control victims are now claiming was put in by their dentist, unbeknownst to them, and causing them to hear "voices in their head." These were placed under caps or lodged in the jaw.

The human body, much like a computer, contains myriad data processors. They include, but are not limited to, the chemical-electrical activity of the brain, heart, and peripheral nervous system, the signals sent from the cortex region of the brain to other parts of our body, the tiny hair cells in the inner ear that process auditory signals, and the light-sensitive retina and cornea of the eye that process visual activity. The body is capable not only of being deceived, manipulated, or misinformed but also shut down or destroyed -- just as any other data-processing system. The "data" the body receives from external sources -- such as electromagnetic, vortex, or acoustic energy waves -- or creates through its own electrical or chemical stimuli can be manipulated or changed just as the data (information) in any hardware system can be altered.

When we say words to ourselves, silently, or, read a book, we can actually feel the slight sensations of those words in our vocal muscles - all that is absent is the passage of air. Thought reading is an enhanced version of computer speech recognition, with EEG waves being substituted for sound waves. The easiest "thought" reading is actually remote picking up of the electro-magnetic activity of the speech-control muscles. Scientists have also found that they could convert thoughts into computer commands by deciphering the brain's electrical activity.

Powerful CFR and Trilateral insiders have long known how electro-magnetic weapons can be effectively utilized to wage political warfare against America's population. President Lyndon Johnson's Science Adviser, Dr. Gordon J.F. MacDonald wrote the globalist-promoting 1968 book, unless peace comes, a scientific forecast of new weapons.

MacDonald described how man-made changes in the electrical earth-ionosphere can be used for mass behavioral control. He said that low frequency electromagnetic oscillations can attack the low frequency electromagnetic brain waves in human beings.

Zbigniew Brzezinski, the founding director of David Rockefeller's Trilateral Commission, also served as President Jimmy Carter's National Security Director, where he founded the infamous FEMA that is designed to implement world government dictatorial rules over the U.S.A. predicted these exact types of electromagnetic psychotronic weapons.

He stated: "It is possible - and tempting - to exploit, for strategic-political purposes, the fruits of research on the brain and on human behavior... Accurately timed, artificially excited electronic strokes could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the earth. In this way, one could develop a system that would seriously impair the brain performance of a very large population in selected regions, over an extended period."

Low-frequency radiation affects the electrical activity of the brain and can cause flu-like symptoms and

nausea. Other projects sought to induce or prevent sleep, or to affect the signal from the motor cortex portion of the brain, overriding voluntary muscle movements.

The bulk of recent telepathy research in the U.S.S.R. has been concerned with the transmission of emotional or behavioral impulses and the study of physiological response to PK exercises etc...By the early 1970's CIA agents in the field reported that the Soviets were able to influence telepathically the behavior of people, alter their emotions or health, and even kill at long distance.

In a 'Psychotronic War' using microwaves modulated using ELF waves, it would no longer be necessary to kill whole armies by inducing cardiac or respiratory irregular signals. The enemy can simply be incapacitated by disturbing their states of balance or confusing the ability to think logically. The manipulation of human beings, by means of ELF waves is relatively easy to perform.

In 1977, the U.S. Defense Intelligence Agency (DIA) declassified a report describing how vast advances in Soviet psychotronic technology can create the ultimate big brother society, by using electronic mind control against populations to implant ideas and thoughts into the heads of unsuspecting victims:

"sounds and possible even words, which appear to be originating intracranially (within one's own head), can be induced by signal modification at very low average power densities" (VLF & ELF).

The DIA report also said that the Soviets discovered that secret microwave radiation can be used to induce in unsuspecting victims:

"headache, fatigue, perspiring, dizziness, menstrual disorders, irritability, agitation, tension, drowsiness, sleeplessness, depression, anxiety, forgetfulness, and the lack of concentration."

Predicting the use of so-called "non-lethal" psychotronic weapons to support the U.N. occupation of America, a 1988 article stated:

"Government authorities and the military would have to overcome no insurmountable difficulties to modulate carrier frequencies with ELF signals in existing centimeter radio-relay links...an army of occupation could then manipulate a nation's ability to make decisions."

In a 1993 meeting between Clinton Administration officials and Soviets psychotronics experts, including Dr. Igor Smirnov.

Clinton Administration officials wanted to determine whether psycho-correction...programs could be undertaken by the u.s. government. These devices could be used to affect judgement or opinion of decision-makers, key personal or populaces.

Clinton Defense officials expressed interest that the KGB psychotronic devices could be used "in non-violently" clearing areas of potential enemies, snipers, etc. (meaning U.S. gun collectors and patriotic militias).

Former KGB General George Kotov has told American visitors about Russian (KGB) research into 'acoustic psycho-correction.' The process involves transmitting commands into the subconscious of targeted victims through static or white-noise bands.

There she was shown the technique which was pioneered by the Russian Department of Psycho-Correction at Moscow Medical Academy. The Russians employ a technique to electronically analyze the human mind in order to influence it. They input subliminal command messages, using key words transmitted in "white noise" or music . Using an infrasound very low frequency-type transmission, the acoustic psycho-correction message is transmitted via bone conduction - ear plugs would not restrict the message.

According to the Russians the subliminal messages by-pass the conscious level and are effective almost immediately.

These devices appear to work at the Very Low Frequency (VLF) spectrum, the same frequency range as generated by the sinister U.S. Gwen (Ground Wave Emergency Network) system of transmitters.

Pioneered by the government-funded Department of Psycho-Correction at the Moscow Medical Academy, acoustic psycho-correction involves the transmission of specific commands via static or white noise bands into the human subconscious without upsetting other intellectual functions.

Experts said laboratory demonstrations have shown encouraging results after exposure of less than one minute. Moreover, decades of KGB research and investment of untold millions of rubles in the process has produced the ability to alter behavior on willing and unwilling subjects.

The ability to cause death can be transmitted over distances, thus inducing illness or death for no apparent reason. These weapons would be able to induce illness or death at little or no risk to the operator. The psychotronic weapon would be silent and difficult to detect.

Directed-energy weapons currently being deployed include, for example, a micro-wave weapon manufactured by Lockheed-Sanders and used for a process known as 'Voice Synthesis' which is remote beaming of audio (i.e., voiced or other audible signals) directly into the brain of any selected target.

On March 21, 1983, The Sydney Morning Herald published this article by Dr. Nassim Abd El-Aziz Neweigy, Assistant Professor of Agriculture, Moshtohor Tikh-Kalubia, Egypt.

"Russian satellites, controlled by advanced computers, can send voices in one's own language, interwoven into natural thoughts. They can target the population of choice with this diffused artificial thought process. The chemistry and electricity of the human brain can be manipulated by satellite and even suicide can be induced.

Through ferocious, anti-humanitarian means, the extremist groups are fabricated, the troubles and bloody disturbances are instigated by advanced tele-means via Russian satellites in many countries in Asia, Africa, Europe and Latin America.

Another source says that these computers have been fed with the world's languages and synthetic telepathy will reach into people's heads making people believe God is speaking to them personally to enact the Second Coming, complete with holograms!

Today we have intellectual, physical and financial resources to master the power of the brain itself, and to develop devices to touch the mind and even control or erase consciousness.

During the 1960's, brain transmitters as small as a half of a cigarette filter made it possible for doctors

to implant them into unwitting patients during operations easily and without surgery via the nostrils. Implants are now smaller than a hair's width and are injected with vaccine and flu shots. Millions have had this done unknowingly. These "biochips" circulate in the bloodstream and lodge in the brain, enabling the victims to hear "voices" via the implant.

Like all such radio devices, this electrode transmits data from a person's inner life, his mental functions, biological and neurological processes, all of which can be combined to yield more information about someone's life than even that person knows about himself. The implants can be used to "brainwash": to manipulate inner processes, modify or destroy emotions and thoughts, and control behavior in detail.

By means of two-way radio communication, called telemetry or remote control, one can send a wavelength round trip to a brain transmitter in a person's head. The wavelength streams through the brain and returns to a computer, where all aspects of a human being's life are uncovered and analyzed.

By electrical stimulation of specific cerebral structures, movements can be induced by radio command, hostility may appear or disappear, social hierarchy can be modified, sexual behavior may be changed, and memory, emotions, and the thinking process may be influenced by remote control.

Transmitters have no batteries, are activated by radio, and can be used for life, so that the brain can be stimulated indefinitely.

In the newspaper *Delovoi Mir*, "Mind Control" by Ivan Tsarev, 1992, a victim wrote, "They controlled my laughter, my thoughts, and cause pain in various parts of my body...It all started in October 1985, after I had openly criticized the first secretary of the City Committee of the Communist Party.

The Ground Wave Emergency Network (GWEN) was begun in the 1980's by the U.S. Government. The system was allegedly designed for the purpose of maintaining defense communications in case of a nuclear war.

GWEN transmitters, placed 200 miles apart across the USA, allow specific frequencies to be tailored to the geomagnetic-field strength in each area, allowing the magnetic field to be altered.

The GWEN towers transmit electromagnetic waves in the VLF range between 150 and 175 Khz.

"The VLF range was selected because its signals travel by means of ground waves - electromagnetic fields that hug the ground - rather than radiating into the atmosphere. The signals drop off with distance, and a single GWEN station transmits to a 360-degree circle radiating out from it to a distance of about 250 to 300 miles."

Unlike the thousands-of-miles long range ELF waves, the higher frequency VLF waves transmitted by the GWEN system have a limited range of only a few hundred miles.

The GWEN towers will play a key role in U.N. mind control operations because they have the ability to selectively zap specific geographic locations, while leaving other areas unaffected.

In this way, the population in selected regions of the nation can be mentally softened-up. Expected resistance to U.N. occupation forces, from the militias of loyal Americans, can be significantly reduced by having GWEN system in targeted areas transmit specific psychotronic signals that encourage

depression and submission.

In crosscurrents, Dr. Becker stated:

“GWEN is a superb systems, in combination with cyclotron resonance for producing behavioral alterations in the civilian population. The average strength of the steady geomagnetic field varies from place to place across the United States.

Therefore, if one wished to resonate a specific ion in living things in a specific locality, one would require a specific frequency for that location. The spacing of GWEN transmitters 200 miles apart across the United States would allow such specific frequencies to be ‘tailored to the geomagnetic field strength in each area.”

Prior to the construction of the GWEN system, the government conducted experiments on the use of GWEN-type Very Low Frequency transmissions.

The present 58 tower GWEN system is still functioning and cannot be turned off or dismantled without specific legislation from Congress.

Symptoms of psychotronic torture

Here is a description of the cluster of symptoms common to most victims. 24 hours 7 days a week, for years on end, victims are subjected to all kinds of harassment and torture. Most agree that the technology can remotely target and control every nerve of the body. Heart rate can speed up and slow down, bowel movements can be regulated, illnesses can turn on and off in an instant. Victims report microwave hearing or voices in the head and sleep deprivation. Thoughts can be read, and played back to the victim, instantaneously.

People around the victim can repeat verbatim, the victim's immediate thoughts.

- \* dreams are manipulated
- \* behaviors controlled
- \* emotions literally played with and all types of pain can be started and stopped in all parts of the body
- \* remote sexual manipulation and abuse with pedophilia
- \* homosexual and degrading themes are reported regularly
- \* microwave burns are frequently reported, along with all types of bizarre and harassing manipulation of electrical equipment, phone, car, TV and computers
- \* black bag intelligence tactics of tire slashings, break ins and mail tampering are reported
- \* hologram are projected

(The youtube user victimofrothschild identified many of these same symptoms.)

According to victims, it is vicious, amoral, sadistic and cruel. Most victims describe the experience as very debilitating and liken it to mental rape, prison or total destruction of the quality of one's life. Most are labeled mentally ill and live with financial ruin, loss of health, social life and career. All say the technology is very sophisticated and effective as a weapon. Some victims say they would use it on their torturers and feel vindication. It is like a slow death.

Unfortunately for the victims that are being used as guinea pigs for this technology (who will some day

most likely be you) are left helpless as law authorities and government agencies refuse to co-operate with them and psychiatrists label them "mentally ill" in order to keep this a secret.

Recently a youtube user named victimofrothschild uploaded videos of himself claiming to be a victim of Psychotronic Warfare. He originally had 52 videos on his channel but they were all deleted and on the date of this post he currently has 8. His youtube channel can be viewed here:  
<http://www.youtube.com/user/victimofrothschild>

It has been reported that the Rockefellers have been financing psychotronic mind control research since the 1950's.

The Sound of Silence is a military-intelligence code word for certain psychotronic weapons of mass mind-control tested in the mid 1950's, perfected during the 70's, and used extensively by the "modern" U.S. military in the early 90's, despite the opposition and warnings issued by men such as Dwight David Eisenhower. This mind-altering covert weapon is based on something called subliminal carrier technology, or the Silent Sound Spread Spectrum (SSSS), (also nicknamed S-Quad or "Squad" in military jargon.) It was developed for military use by Dr. Oliver Lowery of Norcross, Georgia, and is described in US Patent #5,159,703

From Psychotronic Warfare to Biotronic Materials (excerpts)

Vladimir Muzhesky

Synthetic Plane of Immanence

Whether electronically or materially mediated, psychotronic complexes interact with their spatial background environment and not with their generating concept. The concept itself is rerendered into a spatially invaginated structure intended to reflect and replicate elements of abstract defense. It is a multipolar semiotic system that goes beyond the tripolar systems of Lotman, more reminiscent of strange attractors: it defines multi dimensional landscapes of bioinformational trajectories instead of describing cultural codes. In general, instead of being encrypted in bioinformational activity, culture, with its codes being hacked vertically and horizontally through mental manipulation which disperses personal and collective memory, replicates and counterfeits reflections and intentions and even meaningful positions, then mutates into a new dimension where meaningful and nervous spatialities are fused to form a twisted conglomerate of neuro-space: a virtual plane of immanence for the economy of abstract defense.

It would not be fair to say that cyberspace was out there first. It always was and forever will be a model which claimed new dimensions. Once we speak about modes of existence in this dimension we cannot avoid a correlation with biological informational networks: hence a cyberspatial dummy will never be actualized as in the neomythology of sci-fi literature, but neurolized, as happened with the defense technology in the ex-SU.

Psychotronic generators are units which, by definition, refer to the activity of the human nervous system as much as they are intended to modify the sequences of individual and collective behavior on the informational level. They are materialized discursive formulas of the closure of revolution and resistance as one-dimensional social events. Biotronic revolution has more at stake: it becomes possible for the means of production to be simulated in terms of abstract representations by means of synthetic bio electronic technologies. In this context, the upcoming biospheric shock acquires a different marker: Global Recombination. The environment of Gaia becomes neurolized: the new multipolar mental-technological complexes are being translated from neurospace into the ecosphere and replicated in the environment of the Earth. If it sounds unreal, pick up a cognitive psychology reader and look at the way cognitive maps emerge and function. The search for life in outer space becomes a ridiculous venture: biotronic life complexes send their traces ahead. It is not difficult to see that our civilization finally forms itself into a spatially active system. Its undefined reality (homonified and hypertranscribed in the process of neurosimulation) recollapses: it cannot be given a meaning because it is a semantic warp which changes every thread of our meaning-matter universe.

In accordance with the opposing expert group's interpretation, millions of rubles of the Soviet state budget were spent producing multiple copies of nonexistent field generator dummies. Some saw in it a brilliant money laundering operation, some criminal unprofessionalism. Amidst hot debates, experts had to reach the compromised definition of psychotronic warfare pragmatism. Functionally, psychotronics was subdivided on psychological and enio- or bioinformational warfare. Both of them are relatively close to each other because they are based on related studies and share many research objectives. Thus, it was agreed to understand the term, psychotronic warfare, as military exploitation of bioinformational technologies and its technological reinforcement complexes.

Migrating under varying ideological pressures, pioneers of psychotronics had to switch from one scientific field to another collecting integral expertise, usually in three to four scientific disciplines. Psychotronic research, therefore, was interdisciplinary by definition.

What the State Defense Committee expected psychotronics to become was slightly more pragmatic: a principally innovative weaponry based on the high velocity psychoinformational programming generator complexes.

As a related weapon system, ray weaponry was defined as the system of weapons based on the powerful sources of electromagnetic, acoustic, laser, and other types of energy generators. The first devices were quite simple: the emission was used to destroy this or that system in the human body. The ensuing development produced more sophisticated results: the ray of energy was modulated in accordance with certain biosystem parameters which impose irreversible transformative regimes

on the system. For example, the generation of ultrasound frequencies which resonate with the oscillation patterns of inner organs, cause acute pain and can result in lethal injuries.

In the beginning of 1992, a group of scientists from the Rostov Medical Institute and the Biotechnology Research Institute, directly associated with psychotronic programs, put forward a petition demanding the elimination of the use and production of psychotronic generators. These institutions had at least a decade of experience of research in the sphere of the alteration of biological tissue resistance under the conditions of co-axis influence of electromagnetic and high frequency radiation. In practice, the application of their research, which made them shut down any further investigation, was the possibility of the remote manipulatory access to the structuring level of the environments of human organisms.

One of the main principles of psychotronic technology is the correlation of human biological activity and the activity of a technological complex. As elements of the economy of abstract defense, psychotronic generators are characterized with the spatialization of concepts in the context of the synthetic neurosimulation of space. Thus, the space of references becomes the space of replication, forming the hyperreal complex of neurospatial material by binding the atoms of human perception and processing with atoms of technological data development.

Many sources name Kiev as one of the centers of psychotronic research. It was one location of a few state funded and independent research groups. Stahovsky-Beridze, one of the independent research leaders, devoted his research to the creation of a technological basis for the support and development of human interactions with weak ecological planetary environments. To the same extent that this man was a genius, his son was an unlucky salesman: after the death of his father in 1982, at the age of fifty-two, which it was claimed had been caused by the extensive use of his machines, Stahovsky-Beridze jr. was desperately trying to sell his father's revelations. In one of those attempts he visited my Kiev apartment. He had a video tape with him where the medical advantages of his father's generators were documented. When I switched on the video, he excused himself and rushed out of the room. As he explained later, according to his father's notes, electronic TV tubes negatively influenced the human body which was previously affected by his generator.

The marketing problem of Stahovsky-Beridze jr. made me first think about the enormous gap between what we call economic production and what it recently has become in light of bioinformational technology. His father's explanatory notes were something between an electronic scheme, absurd poetry, and transcendental comic strips. It was far beyond the limits of the rational discursive resources with which a conventional economy operates. It was negatively economically abstract. I let Beridze jr. go without comments: anyway, his plan was desperate.

However, the generator itself was approbated by several medical institutions and proved to facilitate the treatment of cancer. Another research center investigated the effect of the Beridze-Stachovsky generator on growing seeds: positive results were detected.

Beridze-Stachovsky investigated the absorption of the energy emitted by his generators on the proton level. Through the method of nuclear magnetic resonance, he detected a change in the level of energy of the affected hydrogen nuclei. One of the participants of the research group volunteered to test this generator on herself. After several trials, she woke up in the night from excruciating pain. She described feeling as if every particle of her body was falling apart, as if every cell would turn inside out. She made it till morning. The effect was not studied further.

Another center for psychotronic research was The Institute of Material Research in Kiev. Within its experimental framework, there were programs of melted metal structural modification with the use of field emission. The center was working with the theory of spin fields (the same fields which were crossed out of existence by the opponents of psychotronics). According to this theory, all organic and inorganic objects acquire spin fields: the fields of rotation. As these fields are very weak in nature, they are usually neglected in the analysis of physical systems. However, it is possible to reinforce spin fields, by distorting the plane geometry of a physical vacuum with a certain form. In this case, spin fields can be registered with physical, chemical, and biological indicators. Spin fields resemble gravitational fields in their properties. For example, spin fields, cannot be screened practically. They can expand on substantial distances with a phenomenally small level of decay. It is considered that generators based on these fields can affect biological systems on the cellular -molecular level. In accordance with the institutional report, their test generator had a 40 cm active range. This was the main thesis that the director of the institute used in his defense against the accusation of being a part of the "inhuman psychotronic warfare escalation." However, by the time of his interview (around 1992) the materials affected by this generator were already going through final testing programs. The research group claimed that data already available let them foresee clinical applications of these materials for purposes of stimulation or sedation.

In conversations with independent researchers (who claimed to design defense generators which could neutralize natural and artificial field emission sources), many of them shared the opinion that there exists at least a dozen research groups which develop psychotronic equipment. Moscow, St. Petersburg, Tomsk, and Novosibirsk, among others, were named as active research locations.

In the course of its history, psychotronic warfare went through the following three stages: launched as research in the psychological transformation of "human system - socio/biological environment

interaction," it very soon included the studies of technological reinforcement of psychophysiological transformation factors and concluded in the complex of bioinformational technology. A priori focused on neurological and perceptual modulation, bioinformational technology finds its roots in the very irrational soil of human thinking. Thus, the subject of psychotronics became a conceptual bridge which joined the first studies of paranoid reaction to the suggestion of electromagnetic devices with the technological research itself. Once Vernadsky introduced the notion of the noosphere as the higher transformative structure in relation to the biological substance of the earth, many started to look for the transmitters of hyperinformation. The abstract economy of neurosimulation began in the 20s, when there started to appear clinical cases with patients declaring that their bodies were destroyed by electromagnetic devices controlled by secret organizations. As one of the patients hospitalized in the early 20s describes it, "behind my ceiling there was a device installed which made me soak in electricity. "

In the 90s, electromagnetic paranoia was substituted with the pathological fear of bioinformational control. As one of the patients claimed, her head, heart, and dreams "were remotely controlled from the Men and Device Control Center (MDCC)." She was sure that her behavior and speech were completely controlled by transmissions which she received, directly, through her brain. "Their shift lasts about six hours. When they start, my teeth shake... I can't describe everything. Sacharov [one of the most famous dissidents V.M.] was also killed by the MDCC."

If we compare both cases, it becomes clear that electromagnetic suggestion plays a stronger role in the first case, while the second possesses a wider functional and referential frame of informational control. If we can evaluate the irrational input of technology, then it could be formulated as spatialization, as opposed to conceptualization of discourses, with the waves and transmissions acquiring a more meaningful position and shifting more to the center of the paranoid attention field, which becomes the center of the technoparanoic domains of mentality.

Finally, as an illustration, we can refer to an interview of Kalugin, ex-Major General of the KGB. He was asked if the concept of psychotronic warfare was familiar to him. Kalugin's answer (possibly due to his recent dismissal), the first in the history of the mass media's reaction to the psychotronic issue, was positive. He also mentioned that he personally knew researchers who had developed a behavioral manipulation technology based on this principle.

As we see, the economy of abstract defense interpenetrated many layers of Soviet society before this geopolitical monster perished. It came a long way from the microparadigm of singular vulnerability of the human system in the mid 20s to the macrolevel of anti-epistemology and multipolarity of the 90s. The foundations of the micro paradigm, I guess, we can find in Kazamalli's Theory of

Cerebroradiation Reflex, that he discovered in 1912. In accordance with the Italian research theory, during intensive psychosensoric activity, the human brain emits electromagnetic radiation, which can be measured and calibrated. For Kazamalli, this reflex was evolutionarily pragmatic, as it established the correlation between the human brain and ether. Marconi, a Nobel Prize winner and one of the founders of radio was involved in this research as a consultant.

As to the macrolevel, we can refer to Kaznachejev's research (although it occurred seventy years later) in the quantum interaction of cellular levels of biological structures and the research of the interaction between complex 1/F noise systems and its operators.

Among the founders of the psychotronic technologies in Russia were Margarita Telce (daughter of Dzerzhinsky, then the Director of the State Defense Committee) and professor Deluni. The main emphasis was made on the psychotropic effect on the basis of natural and synthetic drugs. But even back then it was detected that the speed of the human system transformation is substantially accelerated if the subject is simultaneously affected by high frequency electromagnetic radiation. According to the testimonies of Soviet political ex-prisoners, high frequency EMR emitters were used in the Vladivostok and Lefortskaya prisons, and the Orlov and Serbsky psychiatric clinics between 1989-90.

On January 31st 1973, in one military unit, an experiment was made which, if it were as widely known as CIA psychotropic research on soldiers, could have had an even stronger public resonance: it probably violated more than a dozen human rights conventions. The complex which was tested was Radiodream. The objective of the experiment was to investigate the influence of modulated electromagnetic radiation on a human system. The first testing program was arranged on the personnel of the 71582 military unit in Novosibirsk. The results were considered positive. In accordance with the researchers calculations, the Radiodream generator could be effectively used in the 100 square kilometer city, with all the inhabitants being affected by deep dream induction.

In the same way that after the multiple experiments with psychotropic compounds on civilians, as described in declassified CIA archives, many psychedelics were reutilized on an alternative community basis, Soviet experiments with psychotronic generators formed the technical and intellectual basis for a number of autonomous biotronic communities to sprout. One of these groups was formed by Faidish. It functioned on the basis of a psychoenergetic resonator, which Faidish describes as, "a kind of crystal structure composed of the lines of electromagnetic fields." Based on principles of dissipation, these generators formed a locus of approximately a seven square meter active range. Not a very big territory compared to that on which biotronic viruses can be deployed using today's electromagnetic environment of the net.

Another model of Faidish's community was based on a He-Ne laser dissipative structure. In his theoretical research, Faidish connects the concept of the neoarchetype with the concept of the strange attractor, which makes the dissipative effect possible. Thus, all concrete semantics are being erased from the realm of the biotronic mentality. This is the first step towards mental justification of overcoming the thermodynamic gap between neuro and technoprocessing: the chains of the senses are equalized in level, no concepts in biotronic mentality are possible unless they are constructed of the particles of neurospace, which implies that there can be no inner/outer (not even a simulation) border for a human system. This is where postmodern hyperreality ends without being actualized: it is censored out, neuroalized. The community which performs the function of the censor in neurospace is more of an immune organ than a communal structure. The abstract economy of defense becomes revitalized with the immunity principle where people and technological complexes play the role of informational filters. In accordance with Kaznachejev, a leading Soviet expert in bioinformational technologies, psychotronic warfare can be defined as a military use of psychotronic technologies including their means, methods, techniques, and generators. It is also possible to define bioinformational or eniowarfare as related branches of military development. On the other hand, an essential definition of the subject of both is very ambiguous, which research experts usually explain as a symptom of the young age of the discipline. Regardless of their pragmatic infantile unpredictability, the results of psychotronic technological developments were introduced into mass production and military use because of their suggestive power. The result was not a jump to another coil of the military economic race, but the formation, on a material level, of a certain plane of bioinformational immanence. Basically, a net of objects and, eventually, a space was formed which was not always directly connected to brain activity, but possessed an ultraconceptual status: it was designed and modified to structure individual and collective mentality. It enabled the modulation of the selforganizing processes of the inner environments of a biological system, which had no points of reference in any legal systems in history. With its own instruments of control at the end of its existence, Soviet society, as a sociopolitical entity, was selfcensored out into the ultraconceptual storage of bioinformation. It was the point when biotronic hiatus coincided with social death.

### **Accidental Terrorism**

Establishing a connection between a technological complex of a generator and the complex of a biological system, psychotronics, as a particular case of the abstract economy, makes a neuroturn in mentality, reinforcing negative mental feedback loops: so many discursive explanations of this phenomenon have already been found: existential vacuum, unpredictable turn, unification of discursive

dimensions. All these theories reflect the fact that under the influence of a growing neurodimension, the mentality renders itself as an unnecessary appendix of the fusion of bio and technosystems, which forms a technocerebrum informational warp.

Another expert, Kholodilov, suggested that many researchers focus on the technological device and neglect the role of the human operator. He considered that the effect of the psychotronic generators is based on the interaction with a neurological system of the operator. The most important part of the psychotronic complex, as he continues, is a trained operator. A human system programs the psychotronic complex, and in accordance with its program, the same complex can be used for a variety of purposes. Kholodilov's point of view is shared by Schepilov, a member of the research team of the Eniotechnology Center in Moscow. In his view, psychotronic generators are technological systems based on the emission of weak wave-type processes which interfere with neural and nervous activities. The role of the operator is to detect, calibrate, direct, and maintain this interference. Schepilov recalls accidents when the operators, as a result of a generator misuse, would fall into psychosis. According to him, numerous generators, which are currently available for military purposes, were specifically designed to harmfully affect respiratory, cardiovascular, and neurosystems.

In the end, sets of spin generators were produced and the basic elements for a synthetic plane of immanence were created. However, with the collapse of the Soviet Union, economic mechanisms which fed this abstract enterprise were destroyed. The funding was terminated on the very verge of creating a general technology of social manipulation. The researchers that lost their jobs in classified institutions launched independent centers and started to adjust their inventions to a free market economy: a friend of mine with reliable sources told me recently that one of the most well known Moscow bankers was killed via his telephone by an electromagnetic impulse. It may, of course, be a rumor.

By association with the research in psychotropic compounds and techniques, the 50s are usually considered to be an historical borderline, when the infrastructure of underground science was finally crystallized. Since then, it has become quite a network that has adopted a great deal of contemporary psychotronic innovations. That is why a number of experts believe we should expect the appearance of unknown means of crime, both chemical and physical. Kaznachejev, for example, pinpoints the possibility that knowledge of the informational traumas of the biosphere can be misused by terrorist organizations.

As terrorism is always a transgression of locality, it always exists between two countries, two places, it needs a confrontation to be alive. The net is more than a favorable environment for any kind of abuse because it transgresses locality by definition. However, the most probable form of digital abuse, the accidental, implies that if

regarded as active transformative factors, spontaneous or intentional (it is impossible to find out post factum), biotronic formations can create both positive and negative feedback loops within the environment of a global computer network. The establishment of a priori disintegrated agent, place, and means of action, leads to neuro-simulating accidental terrorism, which is now globally possible with the unification of local computer net standards. The process of electronic impersonization puts biotronic complexes into the role of real agents of actions and meanings. The theory of catastrophes seems to acquire another subject here.

In general, the elimination of maternal biotronic environments positions abstract economy constructs as parasites towards any other environment in which human and technological systems are correlated in perceptual and intellectual activity. Hypothetically, it can become a metavirus, a form of organism which parasite on hyperenvironments, only reprocessing the very matter which emerges between human perception and its reflected simulation in electronic space. Among the potential affected zones there can be mass media, communication system, remote control machinery, and informational networks. All of them have already a syndrome of reflected neuralization: for example, the growing exploitation of the 3D effect can be interpreted in this context as the neuroization of originally perceptually based media; computers simulate a trivial model of space by mirroring neural functions and letting the brain render its functional reflection and correlate its spatial processing along with it. There is always a parallel processing involved in neuroization, imaginary chains fighting for real spatial status. Forced into synergy via virtual parallel processing, the human brain can rely only on abstract representations which possess no immanent spatial reference, but refer to the ultraconceptual planes of human thinking, the operational dispositions of neurospace.

In the ex-Soviet Union today, psychotronic complexes produced independently often barely resemble their functional prototypes. For many it became a neofetish of the information age, the objects of power which can be the sparkles of neoreligion, or the viruses of the first neuroepidemy. The fusion of psychotronic and drug markets, which is happening now in Russia, results in a bioinformational and field narcotic movement. Generators penetrate society, appearing in offices, stadiums, TV broadcasts, etc.. There is only one explanation for it: a dead society acquires biotronic status, the new form of social flesh.

Society is no longer the mode of production, it is the mode of remote correlation of human systems, which includes bioinformational processing and related phenomena. It is obvious now that bioecological and bioinformational catastrophes can not be predicted without this type of knowledge. In this framework, nanotechnology research, which eliminates the thermodynamical barrier between a synoptical molecule and a computer chip, seems to be a reflection of

the mirror type of bioinformational organization.

Vladimier Mushesky will soon publish a book on Russian Psychotronic Warfare at Autonomedia Press, New York

*Humanity is today being subjected to massive levels and intensities of electromagnetic radiation and frequencies in its myriad of forms on a daily basis.*

*From televisions, radios, electrical appliances, computers, microwave ovens and cell phones to radio broadcast stations, cell phone towers, power lines, ELF and VLF (extremely and very low frequency) transmitters, space-based psychotronic arrays and even solar flares, Mankind is under assault from natural and artificial electromagnetic energy as never experienced before in human history.*

*Holy Scripture has revealed that Lucifer (Satan, the Devil, the chief fallen angel/cherub) is the prince of the power of the air. As electromagnetic frequencies proliferate on Earth, many new 4th and 5th dimensional "stargates" are sure to open for Lucifer's fallen angelic kingdom- 1/3rd of the heavenly host- to more fully integrate and externalize on in these last and evil days before the Judgement.*

*Amongst the psychotronic technologies and projects that have recently brought mind altering and mind controlling electromagnetic spectrum frequencies to the mind of Man include; the Russian Tesla Magnifying 'Woodpecker' transmitter near Kiev in the Ukraine (began July 4, 1976), H.A.A.R.P. (the High Atmospheric Auroral Research Project) based in Gakona Alaska USA, G.W.E.N. (Ground Wave Emergency Network) of -300- transmitter towers spread across the USA, so-called "non-lethal" radio, microwave, ultrasonic and acoustic ELF and VLF (extremely and very low frequency) generators and transmitters, a proliferation of hundreds of thousands, if not millions, of cellular phone towers, a global array of land, sea and space-based satellite systems using radiation, electromagnetic, sonic and laser technologies and energies, as well as the emergence of "Wi-Fi" clouds and hotspots (for wireless internet access) in many cities throughout the world.*

The central rationale behind electromagnetic/psychotronic mind control technology is that it is a battle for the human mind.

Colonel John Alexander, author of the book, 'Warrior's Edge', and program manager for Non-Lethal Psychotronic Weaponry at Los Alamos National Laboratory in New Mexico USA, has called it "the new mental battlefield". A small sampling of the list of books written on the subject of electromagnetic mind control include; Mind Wars, The Mind Race, Psychic Warfare, The Body Electric, Operation Mind Control, Psychic Dictatorship, Angels Don't Play This HAARP, Psychic Control of the Mind: Towards a Psychocivilized Society, Crosscurrents etc...

The arsenal of electromagnetic/psychotronic weapons used to manipulate, control and entrain the human mind are an integral part of the overall battle plan of the New World Order. The secrecy involved in the development and propagation of electromagnetic mind control technologies reflects the tremendous power that is inherent in them. To state it bluntly, whoever controls this technology controls the minds of all men. The technical capability to remotely influence 6.5 billion human brains with the sole intent of manipulating human behavior, the human nervous system, the human psyche, the thoughts, moods and mental states and health of the masses, constitutes a level of tyranny never before witnessed in all of human history.

Acoustic "psycho-correction", behavior modification, remote neural monitoring, psychic and biophysical warfare, brain-wave entrainment, bioelectromagnetics, subliminal programming, psychotronic mind control etc... are all the terminologies used to describe the insidious and invisible assault being waged upon the collective human psyche by electromagnetic technologies of the 21st century.

Brain wave manipulation from a distance using phased and pulse-modulated infrasonic and ultrasonic generated frequencies designed to control the very thoughts and feelings of a subjected populace is every dictator's dream come true.

*Because the human mind is so sensitive and vulnerable to outside electromagnetic intrusion and has no natural ability to erect a "firewall" to protect itself, biowarfare on the mind may prove to be one of the most effective means of projecting power by the planet's privileged elite in their quest to establish a New World Order.*

*Beyond the planetary electromagnetic frequency weapons now in place and operating (Russian Woodpecker, HAARP, GWEN etc...), there are large arrays of ELF/microwave cellular phone tower grids being erected and already operating at the local community level in many areas. These towers are putting out levels of power that exceed all cellular phone requirements by a large margin, with the hidden purpose of exerting electromagnetic mind control influence over entire populated areas- specifically tailored to each community.*

## **Men Who Control Psychotronic Weapons**

According to the Scientific Committee that met at the Second International Congress on Psychotronic Research in 1975, psychotronics is "a science which, in an interdisciplinary fashion, studies fields of interaction between people and their environment (both internal and external) and the energetic processes involved." The committee said that "Psychotronics recognizes that matter, energy and consciousness are interconnected in a way which contributes to new understanding of the energetic capabilities of human beings, life-processes and matter in general."

The word Psychotronics is a combination of psychology with materialist science. "Psyche" stands for soul or spirit. "Tronics" associates the soul or spirit with modern technology.

Since this is true, then the men involved into 'peeping' into other people's private lives to 'study' them, especially without permission, is a violation of human rights. Everyone on this planet should be concerned.

## **What Psychotronics Was Made For**

The original intentions of the men who promoted Psychotronics was to determine how the mind worked, and if there was a way to control the mind of another individual or group of people. Supposedly, this was meant for government agencies in matters of crowd control, more effective war, or correction of 'wrong' thinking.

A problem has arisen with the leaking of the technology to the public making psychotronic weapons available to any devious, creative mind.

## **The Minds of Psychotronic Men**

Think about this for a minute. What is it like to look into the mind of another individual? To be able to see clear down into their soul or spirit? To be able to retrieve every memory stored in the conscious and subconscious mind?

In the beginning all psychotronic men did was watch. They became the Watchers of the World. With that forbidden knowledge came a disintegration of their spirit since they had to de-humanize the individuals they were studying. They were no longer humans - people. You and I. They were test subjects just like any other living species that science has used to test their theories on.

## **Are Psychotronic Capabilities Possible?**

The answer most definitively is - YES! Almost every living thing on the planet is testament to that. One Internet website that sells a psychotronic product called the Brainwave Receiver proclaims this statement:

"Our goal is to develop new advanced technologies and concepts to reveal, and validate technology that has been suppressed over the past 70 years by big business, and big government."

"...Most of the various items we deal with are considered fringe or even a bit crazy by the masses. Our goal is to attempt to validate those items, and produce working models in order to prove their validity."
