

Queuing

Quick E is located in a common space, open to all employees. To prevent other colleagues from interrupting collaboration, a queuing system has been incorporated into the outer edges of the table. Lighting signals to others when the table is approachable and when not to disturb.

Smartboard

Electronic Smartboard technology is integrated in the center of the table to aid in the generation of ideas.

The Smartboard can rotate 360 degrees for an ease of use at all angles. The lip in the Smartboard indicates the top as it is rotated. Therefore when the notes are saved to the network, they will be right side up.

Before erasing the Smartboard, push the button to wirelessly save any notes to the companies network for use at personal computers in the workplace.
