DISHA
LEARNING MANAGEMENT SYSTEM

Final Product Development and Interaction Design

The final protoyped product has a simple, easy to learn, easy to edit interface. Many of TownSchools incoming teachers have only basic computer literacy, so having a clear interface is key.

• Simple geometric shapes designate areas of importance.

• A cool color palette encourages concentration and eliminates any visual distraction from the learning content.

• Easy to access online tools are located on the side toolbar to enhance connectivity and trainer/trainee interaction.

• Available training modules are all displayed on the main screen. Each module contains text, video and questions to encourage greater interactivity within learning.

• Completed modules are grayed out to represent completion and encourage progression.

• An architecture for the Disha user experience was developed creating a simple yet strong structure.
