

LEV GUIDE

Supracor[®] Midsole

The use of Supracor[®] TPU bonded honeycomb in the midsole drastically lightens the Lev with the same technology that is used in jet fighter seats. Being TPU means it's recyclable as well.

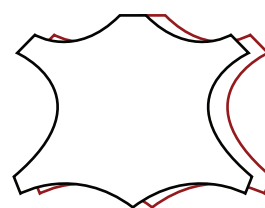

Dynatec[®] by Schoeller[®]

An advanced fabric that is abrasion resistant, water resistant, and light. Its finish is impermeable to water, oil, and dirt. It is made up of Cordura[®], Dynafil TS 70 TS, and elastic monofilament.

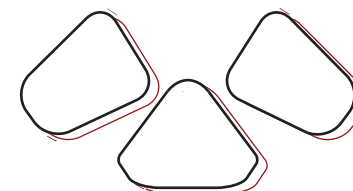

Infinity Strap

A three dimensional strapping system that locks in your foot from multiple angles, holding down both your heel and instep. Can be fine tuned at the heel of shoe.

Nubuck Leather

A supple and durable leather that has proven time and time again to be a top choice for high end outdoor shoes. Its finish is water and dirt resistant.

Vibram[®] Idrogrip

Vibram[®] Idrogrip is not a fair weather sticky rubber as it was developed for sticking to wet surfaces just as well as dry. So if that afternoon storm comes in quicker than you thought you won't have to worry about your footing.

Pixie Dust

For those times you don't think you can make it back to camp. "We can fly! We can fly! We can fly! Yep, just a little bit of pixie dust."

Disclaimer: Lev Guide does not actually allow you fly. You need imagination too
