

Equilibrium keyboard platform

Role: project design lead, manage outside design resource

Equilibrium was conceived to be the flagship keyboard platform for Details. Features are designed to reduce repetitive stress injuries associated with intensive computer use. Features include:

- **Independently tilting mousing surfaces** to allow the mouse to remain horizontal (without inadvertent movement) when the keyboard is tilted in an ergonomically preferred negative tilt orientation.
- **Side to side platform adjustment** for on-center keying whether right or left handed
- **Adjustable height palmrest**
- **Document holder** that stays inline with the computer monitor
- **Low profile design** to increase knee clearance
