

# We're Going Green!!!

## BVnet™ ...

**B**Vnet™, a cutting edge solution developed by Bureau Veritas North America. BVnet™, a secure web-based tool, has the capability to **digitize the entire plan review and inspection process**, saving precious time and costs. It is customized to the needs of each client and the requirements of the project.

Submittals of electronic drawings and documents, review/comments, status, project photos, authenticated approvals, certificates, and other project/contract data can be securely accessed by clients, partners, and employees at relevant phases of the project through our Electronic Document Submittal and Archiving (EDSA) program.

BVnet™ allows existing staff to greatly increase project control and productivity while providing your building department access to available, highly-skilled resources on a national level.

BVnet is a solution you can trust:

- Adobe's MAX 2007 Honorable Mention in Communication and Collaboration
- CELSOC 2006 Engineering Excellence Award
- Western Council of Construction Consumers 2006 Distinguished Honor Award
- Computer World Honors Program 2006 Laureate and Top 5 Finalist in the Environmental, Energy and Agriculture Category
