

# ILLUMINE

The pathway to safety

After all of the research and development, the product you see above is where it has come until now. This is Illumine. It is a full emergency lighting system built into an outlet cover. When looking into where the new lighting system needed to be located, it was clear that it needed to be as close to the ground as possible to make sure that the light was focused where the people in these situations would be. With most outlets being mounted around 12 inches off the ground it became my main target. I also didn't want to sacrifice any of the plugs in the outlet cover if it was possible. It was also a concern that these new lights blend into everyday life in a building as much as possible because with the current emergency lights they are mounted high where everyone can see them, they are fairly large, and they are not visually attractive. With this product, most people will never know it is any different than a regular electrical outlet until it is needed in an emergency situation.
