News, Events & Updates

**Event: AZ, USA high school students show off game design skills**

Arizona teenagers are getting a hand with learning how to break into the video game industry, thanks to a new program at Arizona State University called "[Camp Game](#)." The program lets 15 students spend six weeks under the instruction of industry veterans. Students work on a number of amateur games and then put their projects on display on the last day of the program.

This year, the final Camp Game titles will be available for the public to play on 18 July. Read more at <http://sci.asu.edu/campgame/>

**Resources: 55 Free High Quality Icon Sets**

In this post, we present 55 more excellent, free and professional icons for desktop and web design, courtesy of Smashing Magazine:

[www.smashingmagazine.com/2008/07/02/55-free-high-quality-icon-sets/](http://www.smashingmagazine.com/2008/07/02/55-free-high-quality-icon-sets/)

**Greenfoot.org: Scenario, labs and worksheets**

Qusay H. Mahmoud from the University of Guelph has published a Greenfoot scenario he uses for his teaching: [Going to the Moon](#). His web page contains very detailed information, including an introduction, PowerPoint slides, labs and - of course - source code.

# Super Thundershot

**By:** [JL235](#)

**Created:** 2008-Jul-15

**Viewed:** 196 times (159 in the last 7 days)

## Scenario Description

READ: You need to be logged in to play!

This is currently only in demo form. You are Super Thundershot and it is your duty to stop the Evil Space Armada from invading Earth and destroying all of humanity. Fly your way to victory!

Controls:  
move: W, A, S, D or the Arrow keys.  
aim: mouse  
shoot: left-mouse button

Your orbiting shooter can be used to stop incoming bullets. Destroy the earth supply ships that fly on from the left in order to collect power-ups.

## Comments (10)

[delmar](#) writes (on 2008-Jul-15):

Wow!

[mjrb4](#) writes (on 2008-Jul-15):

I don't know why and it might just be me, but this didn't work until I logged in :S

Apart from that, amazing graphics, looks really 3D (especially the rocks) and a great game!

[jafish](#) writes (on 2008-Jul-15):

Nice work!

[polle](#) writes (on 2008-Jul-16):

Awesome! Really really difficult to play with a trackpad though.

I have the same problem as mjrb4 though. Joe, I have send you some debug info via email.

[davmac](#) writes (on 2008-Jul-16):

It just needs sound effects...

[trickster](#) writes (on 2008-Jul-16):

Cool graphics!

[JL235](#) writes (on 2008-Jul-22):

Thanks for the comments. I plan to add sound for the final version, some more enemies and a boss. I'm pretty sure I now know why it doesn't work unless your logged in and am working on a temporary fix.

[langy](#) writes (on 2008-Jul-22):

Awesome game. 3d effects are great. Needs sound and a boss though.

[djb](#) writes (on 2008-Aug-01):

I haven't got a clue how to play this, but it impressed the life out of me!

[Blanked](#) writes (4 days ago):

Had to register for this, but I'm glad I did =) Hard to play, but great concepts.

MathGame01

By: [dbal](#)

Created: 2008-Jul-22

Viewed: 196 times (159 in the last 7 days)

### Scenario Description

PROJECT: MathGame01

PURPOSE OF SCENARIO:  
I am publishing this scenario in support of an article that I plan to publish on the topic of custom GUIs using Greenfoot. If and when the article is published, you will find a link to the article at

<http://www.dickbaldwin.com/toc.htm>

This is a relatively simple educational game for children that illustrates the use of custom labels, custom menus, text input, simple animation, sound effects, and a few other strengths of Greenfoot as a Java development platform.

The default screen consists of a title and instructions for starting the game.

When the user clicks Run, the game board appears consisting of the same title, two menu headers, and a simple math problem. The two menu headers are:

Game  
Skill Level

The Game menu provides the following options:

Addition  
Multiplication

The Skill Level menu provides the following options:

Kindergarten  
First Grade  
Second Grade  
Third Grade

Disclaimer: Because I have no expertise in elementary education, those skill levels are approximations at best.

The bottom portion of the screen contains a simple math problem with instructions for the student to type the answer and press Enter.

If the student enters the correct answer, a "ding" sounds, a large happy face dances across the screen, and words of encouragement are presented in green followed by a new problem to be solved.

If the student enters an incorrect answer, a somewhat negative sound effect is played and a large face with a frown dances across the screen. The correct solution is presented in red followed by a new problem to be solved.

VERSION or DATE: 07/22/08  
HOW TO START THIS PROJECT: Click the Run button.

AUTHOR: Dick Baldwin

USER INSTRUCTIONS: Click the Run button. Then select the game and the skill level from the respective menus, type the solution to the math problem and press Enter.

Visit the [web page](#) for this scenario.  
Download the [source for this scenario](#).

### Comments (5)

[mjrb4](#) writes (on 2008-Jul-22):

Nice! Looks like a really good start to something here, and the menus work really well.

Couple of improvement suggestions if you're interested - how about a timer? You could turn it into an actual game where you have to answer as many questions as you can in the specified time, then get a score at the end of it all.

Also, I hit enter by accident a couple of times and it said 0 wasn't the correct answer - fair enough, it wasn't, but it'd be nice to have something that said you can't give an answer before you've typed any number? It'd also be good to stop anyone typing letters at all :)

Then there's the obvious things about other problems. Addition and multiplication - the next logical step sounds like implicit differentiation to me! Oh ok. Perhaps there's subtraction first.

Good start though :)

[dbal](#) writes (on 2008-Jul-22):

Thanks for the comments. I'll consider an upgrade containing your suggestions. Maybe a numeric text box that ignores all keystrokes other than numeric keystrokes followed by the Enter key.

Dick Baldwin

[mjrb4](#) writes (on 2008-Jul-22):

No problem :) The numeric box sounds like a good idea. Another thing in general for the text box, I think it'd be good to just allow characters - i.e. things like the arrow keys and function keys could get filtered out.

A new version of this scenario was uploaded on Wed Jul 23 15:55:36 UTC 2008

[marla](#) writes (on 2008-Jul-24):

Thank you very much for including the source - don't you want to tag it with the with-source tag?

A new version of this scenario was uploaded on 2008-Jul-24

A new version of this scenario was uploaded on 2008-Jul-24

[dbal](#) writes (on 2008-Jul-24):

Done. Thanks,  
Dick Baldwin

### Downloads

#### Download the current release of Greenfoot (1.4.5)

For Mac, Windows and \*Nix

#### Download previous versions (unsupported)

Previous versions of Greenfoot are archived here. Note that they are no longer supported.

#### Greenfoot image collection

If you want to develop your own scenarios, some icons and images may be useful. You can find some in the Image Collection.

#### More example scenarios

The Greenfoot download includes some sample scenarios. Descriptions of those scenarios, and additional scenarios to download, are available on the scenario page.

### What’s new in Greenfoot

Version 1.4.5 (2008-Jul-2)

- Gallery related improvements:
  - Notify user when overwriting existing scenario on Gallery.
  - Dialog boxes in applets no longer freeze the browser.
  - Add tags when exporting to Gallery.
  - When "Locking" the scenario, disable moving of objects with the mouse.
  - Option to include source code when exporting.
  - Title-field to change the name of a scenario as it is seen on Gallery.
  - Fixed bug: submitting scenario with a multi-line description broke the scenario.
- "Get" objects from inspector/method result into the world.
- Speed slider range is changed.
- And a lot of bug fixes...

### Getting started

You can get started with Greenfoot in three easy steps:

#### 1 - Install the software

If you don't have a Java system installed on your machine, [download and install](#) Java from Sun Microsystems. You need Java 5 (JDK 5.0) or later.

Then [download Greenfoot](#) from the downloads page and install.

#### 2 - Join the community (optional)

[Subscribe to the mailing list](#) or [join the discussion group](#) to discuss ideas, ask questions, find out what other Greenfoot users are doing and give feedback.

#### 3 - Read the tutorial

[Download the tutorial](#) and read through it. Work along as you read, and within minutes you'll be right in the middle of Greenfoot programming.

### Tutorial videos

On Greenfoot.org, we are starting to build up a library of short tutorial videos. Currently, we have only jut started, so there is not much here yet. Our goal is to build up a collection of videos for every stage of development - from simple basics to sophisticated tricks.

Watch the videos available, and check back again later—there may be more available in a few weeks.

- [Greenfoot license and background](#)

**Greenfoot API**

The interface documentation (API) of the Greenfoot standard classes is essential if you want to modify scenarios or implement your own.

[View the full documentation online >](#)

[Download the full documentation \(ZIP, 40kb\) >](#)

[Download an overview of Greenfoot class interfaces \(PDF, 91.4kb\) >](#)

**The Programmer's Manual**

An introduction to Greenfoot programming. Note: The manual is currently being written, and is very incomplete. Please check back soon.

[View the manual online >](#)

**Support Classes**

Generally useful classes that you might want to use in your scenarios.

[View support classes >](#)

**View/Report bugs**

View or report bugs and requests for enhancements to Greenfoot APIs in our bug database.

[View our issue tracking system >](#)

## About the Greenfoot Gallery

The Greenfoot Gallery is a forum to publish, use and discuss computer programs (games, animations, or anything else). The programs are created using the Greenfoot environment, mostly (but not exclusively) by pupils, students, and other young programmers.

### About our members

The Gallery is public: anyone can use it, join and submit content - as long as you follow the site rules. They are, in short: Be nice. Don't do anything stupid, offensive or illegal. If you want to create programs yourself, go to the [Greenfoot website](#), download and install the software, and start by following the tutorial that comes with the download.

Many of the scenarios published here on the Gallery include a link to their source code. You may want to download and study some to see how they were made.

### About the creators of Greenfoot

The Greenfoot Gallery is run by the BlueJ Group at the [University of Kent](#) and [Deakin University](#). It was created with support from Sun Microsystems. The site is non-commercial. We respect users' privacy - email addresses or any other user data will not be passed on to third parties or used for any purposes other than the running of this web site.

Developers: Davin McCall, Poul Henriksen, Bruce Quig, and Michael Kölling

## Contact Us

If you would like to contact the administrators of the Greenfoot Gallery, or interact directly with our members, we provide several means to get in touch with us for questions, concerns or comments.

### Gallery site administration

The site itself is administered by:

- [Davin McCall](#) >
- [Poul Henriksen](#) >
- [Bruce Quig](#) >
- [Michael Kölling](#) >

### Greenfoot developers’ blogs

Some of the creators and major users of the Greenfoot environment keep online journals. Read and communicate with them on their blogs:

- [“On Walkabout with Greenfoot”](#) >  
by Davin McCall
- [“Teaching my daughter to code”](#) >  
by Michael Kölling

### The Greenfoot community

If you want to write Greenfoot scenarios, we recommend that you join our online discussion groups to discuss ideas, ask questions, get advice, find out what other Greenfoot users are doing and give feedback.

- [Join the discussion group](#) >
- [Subscribe to the mailing list](#) >
- [Add your institution to the user’s list](#) >
