

PITTSBURGH FITNESS CENTER FLOOR PLANS: FIRST & SECOND FLOOR

OBJECTIVE:

The Pittsburgh Fitness Center is a preexisting, four story building located in Pittsburgh, PA. The design accommodates citizens that work in the downtown area looking to improve their health, and relax during the work day. This project's objective was focused on the application of code compliance to the standards of a professional design.

CONCEPT:

The fitness center's space is designed to reflect the idea of the human body in motion. The idea of the body in motion suggests balance, movement, and weightlessness. There are design elements that can be drawn from these words, such as symmetry in layout to reflect balance, gracefulness and perfection through smooth and clean lines, and light materials that make the space appear to float.

Therefore, by incorporating forms, materials, and patterns that are suggested while exercising, the space visually expresses a main objective of the clientele.
