

**Design Objectives:** The idea on this project was to design and build a modern looking blender, having in mind a very sleek and clean line of design. On the first stage several concepts were developed. After choosing the best concept, a control panel was developed to give it an elegant look. In the second stage a digital render was made to decided which colors and materials were going to be used on the machine. On the final stage, the final concept was built on solid works having in mind the dimensions of a real model.
