

# Infant Stimulus [0-6 months]

respond best to contrasting colors and patterns

the older they get, the more they respond to brighter colors

can see 8-10 inches from face

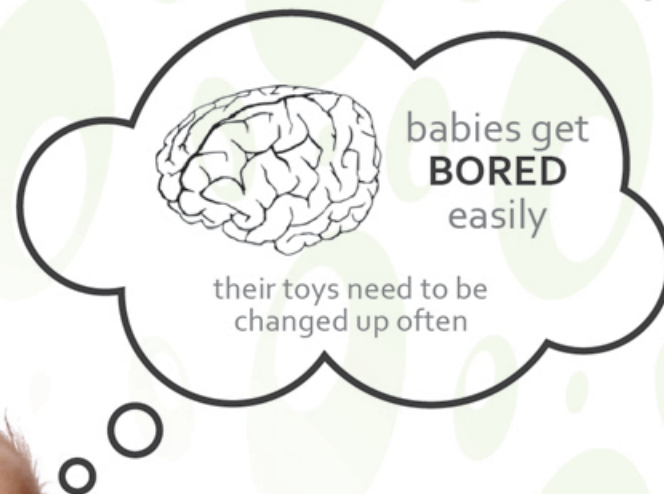

just like with colors, they respond best to contrasting textures

adding a variety of textures can encourage exploration

too risky due to unknown and underdeveloped allergies

babies get **BORED** easily

their toys need to be changed up often

can recognize familiar sounds

slowly learn to associate sounds with images from sight
