

Water is one of life's basic needs.

Is happening all over the world especially in especially in developing areas like:

LATIN AMERICA SUB-SAHARAN AFRICA SOUTHEAST ASIA

- Nearly 1 billion people live without clean drinking water.
- This problem stops education, increases water borne diseases and poverty.
- The most affected are women and children as they are responsible for collecting and managing the water sources.
- The most affected are women and children as they are responsible for collecting and managing the water sources.
- Sometimes they have to walk for miles along muddy roads to get to a water source, which might be the nearest pond where the water is contaminated. Carrying over 20 liters of water on their head can be detrimental for their health.
