

Tough conditions call for tough solutions.

Think about ITT.

Tough conditions call for a Flygt 2600 Series solution. Thanks to patented impeller design and minimal moving parts, these dewatering pumps ensure superior wear resistance and consistent performance over time. In fact, the 2600 Series is proven to deliver a threefold increase in wear resistance compared to traditional dewatering pumps.

Stronger, simpler and easier to maintain, the 2600 Series keeps your operations in gear even in the toughest conditions, and ensures the lowest possible cost of ownership.
