

The frame holders are coded with different patterns for increased usability.

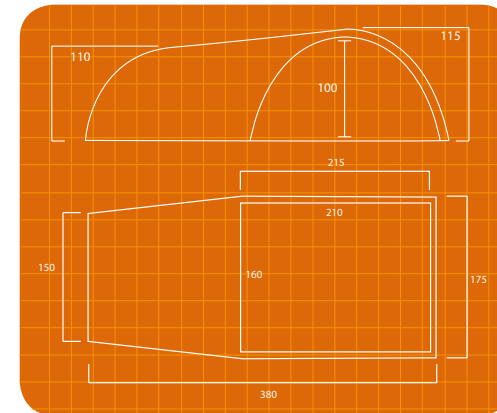

The bags where the frame are stored is used as storage when the tent is assembled.

3in1 offers plenty of space when complete, and when separated it's a light-weight tent and a simple windshelter.

A group of test persons with different characteristics participated in the development of functions.

The measurements and construction makes room for up to three men and three 80liters backpacks.

Tent - 3in1  
 Multifunktional  
 Usability  
 Quality

3in1 is a tent made of modules where the parts can be used separately. The choice of color makes the important parts visible and the holder of the frame is pattern coded for increased visibility. The holders also have an eyelet and a grip for making the put together more easily. The packing bags for the tent and the

frame is used as extra flooring and storage when the tent is put together. A form of questions and usability tests was the foundation of the result. Test persons with different disabilities took part in the testes to make the tent as simple to comfortable as possible for everyone.
