

## Create a Complete Picture of Patient Health

**Mobile dictation. EHR auto-population. Complete documentation.**

The drop-down menus and checkboxes of today's EHR can only capture part of the story. Documentation through dictation, though, is robust, comprehensive and efficient. By integrating a narrative report automatically back into your EHR, Emdat rounds out a patient's picture of health while clinicians remain productive and meet meaningful use.

**More care. Less time. More satisfaction.**
