

## Interact with Your Patients, Not the Computer

**Mobile dictation. EHR auto-population. Untethered access.**

Clinicians want to fulfill their documentation responsibilities without compromising attention to their patients, extending their workday or decreasing their patient throughput. With Emdat Mobile, clinicians can easily create and complete their documentation when it makes sense in the care process, while we take care of auto-populating data to the EHR. This hybrid approach speeds documentation duties while supporting meaningful use.

**More patients. More care. More satisfaction.**
