# Emdat Whiteboard Video

Emdat increases physician productivity when using an EHR, supports meaningful use and saves money
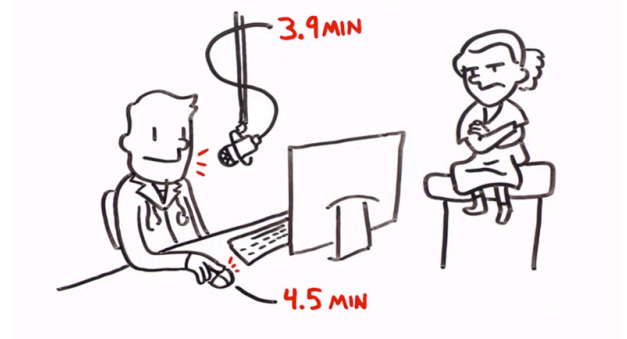

In 2009, The Health Information Technology for Economic and Clinical Health Act also know as the HITECH Act became law, prompting significant financial incentives for adopting electronic health record or EHR systems.

Now organizations must enforce the meaningful use of EHRs while leveraging the benefits and maintaining profitability.   Documentation is not a one size fits all model.

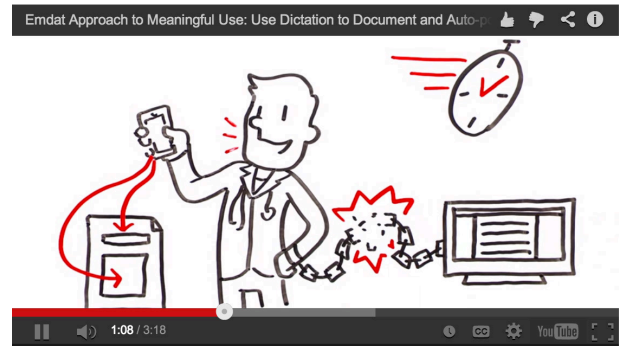

Some providers use point-and-click documentation in the EHR, devoting approximately 4.5 minutes per encounter, while others might use front-end speech recognition, which takes up to 3.9 minutes per encounter.

 For those clinicians that are still searching for a documentation method that works best for them and their patients, there is an alternative.
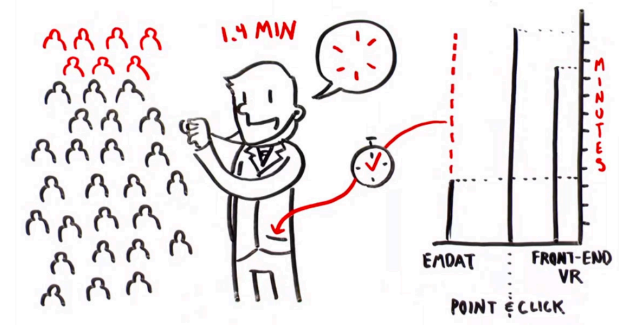

Emdat Mobile allows clinicians to create documentation on mobile devices using the most natural form of documentation — dictation. It's not only less time consuming, but also more convenient because providers aren't tethered to a workstation.

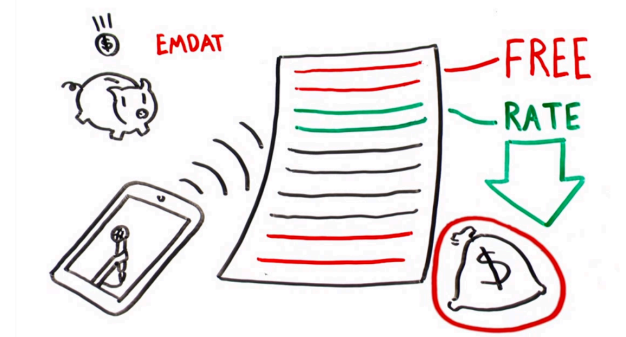

Emdat Mobile heightens the efficiency of dictation by providing clinicians with an at-a-glance view of patient schedules, historical patient information and commonly used templates, reducing dictation time.

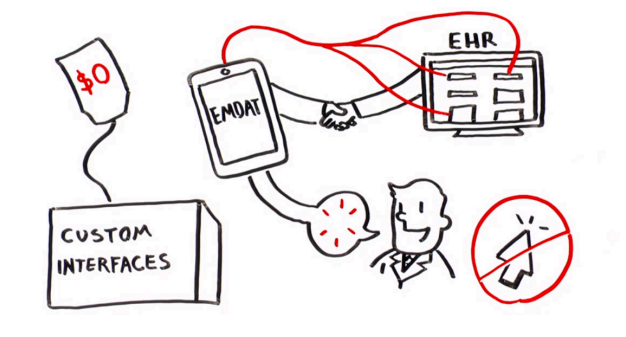

Dictation takes 1.4 minutes per encounter — about one-third less time than other methods. Seeing 25 patients per day, providers spend only 35 minutes creating documentation compared to 112 minutes with point-and-click or 97 for front-end VR.   Imagine how many more patients could be seen each day with those 77 minutes.

In addition to saving time, Emdat saves money. Our exclusive functionality automatically generates documentation content that not only reduces dictation time but also decreases the number of typed lines by as much as 35%. System-generated fixed content is completely free. System-generated editable content is billed at a significantly reduced rate. Corresponding fees drop by as much as 50%.

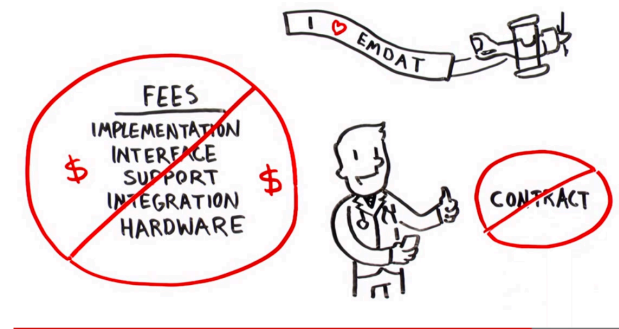

Emdat's tight integration with EHR vendors means customized, no cost interfaces that automatically populate discrete data from the clinician's dictation into the appropriate sections of the EHR, eliminating the need for point-and-click navigation within the EHR.
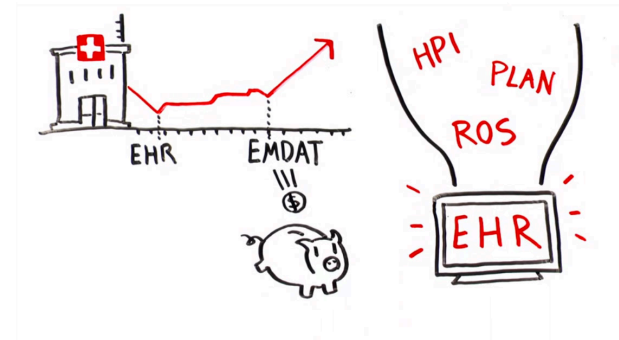

Clinicians can quickly document patient encounters while capturing discrete data to support meaningful use.

Emdat requires no upfront fees. and feels so strongly about our ability to deliver positive outcomes that we require no contractual commitment from our clients.

Emdat is the perfect solution for practices determined to maximize physician productivity, reduce documentation costs and populate the EHR with meaningful use information.

Simplicity. Value. Efficiency. All in one documentation provider.
