

WORK LIFE
BALANCE

Same Patient Load with a Shorter Workday

Mobile dictation. EHR auto-population. Streamlined effort.

Whether entering patient data directly into an EHR or using front-end speech recognition, clinician productivity takes a hit. Rather than seeing fewer patients or working longer days, Emdat allows clinicians to quickly accomplish their documentation goals while capturing the necessary structured data to support meaningful use. This blended approach ensures clinician productivity is maximized, clinician workflow and revenue capacity is retained, and patient encounters are documented comprehensively.

More quality. More satisfaction. More meaning.
