Mission Statement

Our mission is to provide optimum, comprehensive treatment for the maintenance and restoration of oral health utilizing state-of-the-art technology.

Philosophy

All patients deserve to be cared for in a pleasant environment by a team of qualified and dedicated professionals working side-by-side to provide optimal treatment outcomes.

*Creating Excellence
 in Dental Health Care.*

Surgical Suites

With our on-site surgical suites, staffed by experienced board-certified surgeons, our patients benefit from the convenience of comprehensive care in one facility, and the optimum results that only a team approach to treatment can provide.

- IV sedation
- Accurate implant placements with surgical guides
- Increase convenience and efficiency
- Shorter surgical procedures
- Immediate temporary teeth
- Saves time and money

Restorative

Equipped with cutting-edge technology, from advanced imaging and diagnostic capabilities to an on-site lab, our team of board-certified prosthodontists, dental hygienists, lab technicians, assistants and support staff is here to create esthetic makeovers that best meet your needs. Restoration and tooth replacement specialists for:

- Implant supported crowns
- Implant supported prosthesis
- Conventional crowns
- Bridges
- Partials
- Denture
- Composite fillings
- Veneers
- TMJ dysfunction and disorders

Hygiene/Maintenance

Hygiene and maintenance is key for the preservation of your oral health. By providing full service maintenance and comprehensive follow-up care, we are here to work with each one of our patients in ensuring that all preventative measures are taken.

- Normal cleaning procedures
- Fluoride treatments
- Implant cleaning and maintenance
- Oral pathological examination

Why Implants?

Your teeth make a statement about you.

A beautiful smile enhances your overall appearance and charisma giving you added self-confidence and presence. Unfortunately millions of people suffer the difficulties often associated with missing teeth, such as compromised eating habits, speech, and physical appearance.

At the Nanston Dental Group, we understand how missing teeth can result in loss of self-confidence and even the quality of life. That is why we offer the state-of-the-art technology of dental implants as a standard of care for patients dealing with missing teeth.

Whether you are missing one, some, or all of your teeth, dental implants can help to maintain the integrity of facial structures and function that are often lost as a result of missing teeth. By actually replacing the missing tooth root, implants can provide many benefits over other conventional treatment options, and serve as a stable foundation for replacement teeth that look, feel and function closest to that of your natural teeth. Implant treatment is recognized as a proven alternative to conventional dentistry, and patients worldwide can testify to its benefits.

As your health care provider, we want to ensure that you receive the highest level of care available. That's why we not only offer dental implant treatment as a routine part of our practice, but we utilize the Straumann® Dental Implant System. The unique design of Straumann's simple and time-tested system can minimize the length of treatment and patient chair-time, while allowing us to provide our patients with reliable, long-lasting results.

Patient Testimonial

Many years ago, Roger Johnson had lost the majority of his teeth in a hunting accident. He had been fitted with three different sets of dentures to accommodate the changes in the bone structure of his mouth due to bone loss that was occurring over the years until he finally decided to get dental implants.

The difference between the implants and my dentures is like night and day. I suffered for years from the sores and pain caused by ill-fitting dentures, as well as the constant problems of food particles getting trapped between my denture and my gums. My implants are just like my original teeth. I don't even think about them. They are so good and trouble free, I wish I had done the procedure earlier. I can now enjoy foods like apples and corn-on-the-cob, which I couldn't eat with my dentures.

**- Roger Johnson
75 years old, Arkansas**
