

3D Modeling

From 3D modeling to study models back to 3D modeling. After analyzing the form with study models I turned back to the computer to finalize the design, and prepare a file for rendering visualization. I continued to work on how the parts would be assembled. The display is made up of 26 fins, 2 connecting members and 1 Nixon icon. I then developed a cut sheet of all the parts and prepared a file for laser cutting. I also thought about possible names and catch phrases for the display.
