

# User Experience

## Concept One

User interaction with touch screen table. Donors can play games, use the internet, listen to music or use the table for drinks.

Blood mixer is stored under the chair to keep it out of the way and out of sight for the donor. Mixer can be removed easily from the shelf.

Chair allows the feet to be lifted up with a foot rest. Can be adjusted to the donors preference. It also makes it easier to get out of the chair.

Layout out makes it easy for the donation process to occur, without interfering with the social interaction of the table.

The layout encourages donors to donate with their friends in a more social oriented layout.
